SHOP AND LABORATORY.

Let fo tune do her worst, whatever she makes us lose, so long as she never makes us lose, so long as she never and the lower one finer still. At one side of the filter is a conductor pipe, open on the side next the filter, and so though vast, although open to the re-

mercial adaptations of peculiar practical value. The manufacture involves a process not yet given out to the public by the discoverer, who states that, while experimenting with the cotton seed oil Prefer what is good of a lower or inferior work or material to what is bad of a higher work or material: for this is the way to improve every kind of work, and to put every kind of work, and to prove to what was sought—not a varnish for painting, he obtained a substance entirely foreign in its make-up and properties to what was sought—not a varnish, but rubber. So simple is the process, as alleged, that it is not within the protection of a patent—the only safeguard being, therefore, in the secrecy of the process, by the use of which, it is asserted, only 15 per cent. It is required of the genuine rubber to produce a varnish for painting, the obtained as ubstance entirely foreign in its make-up and properties to what was sought—to a varnish for painting, the obtained as ubstance entirely foreign in the substance entirely foreign in the substance and substan Holy in the German language—heilig india rubber, it is said, even by experts,—also means healthy; our English word in the handling of the latter article. Ar-

Presque Isle, Edmundston and points north via Gibson Branch.

The aspect of this life is stern, very stern. It is a very superficial account of it which slurs over its grand mystery and reflective process for imparting a waterproof quality to cotton for anguish. But there is, enough from hour to hour of bright, sunny happiness to remind us that the Creator's name is a dry heat and then spreading it lightly over a smooth surface. With a brush this is painted over with a thin coat of cover a smooth surface. With a brush this is painted over with a thin coat of boiled oil, which, after having become perfectly dry, is treated to a second coat—and a third if necessary—plenty of time being allowed between each for the effect of the operation on the fabric to become perfect. After the last coat has been applied, if the surface remains sticky, a mixture of one-fourth pound of shellac to a pint of water gently heated until near the boiling point, adding to this a small quantity of liquid ammonia, is painted over with a thuin coat of boiled oil, which, after having become perfectly dry, is treated to a second coat—and a third if necessary—plenty of time being allowed between each for the effect of the operation on the fabric to become perfect. After the last coat has been applied, if the surface remains sticky, a mixture of one-fourth pound of shellac to a pint of water gently heated until near the boiling point, adding to this a small quantity of liquid ammonia, is painted over with a thin coat of boiled oil, which, after having become perfectly dry, is treated to a second coat—and a third if necessary—plenty of time being allowed between each for the effect of the operation on the fabric to become perfect of the operation on the fabric to become perfect of the operation on the fabric to become perfect of the operation on the fabric to become perfect of the operation on the fabric to become perfect of the operation on the fabric to become perfect of the operation on the fabric to become perfect of the operation on the fabric to become perfect of the operation on the fabric to a pint of water gently heated until near the boiling point, adding to this a small quantity of liquid ammonia, is painted over the surface. For a yellow waterproof, yellow ochre is employed, and for a black cloth lampblack is found serviceable. The coloring matter of the perfect of the operation on the fabric to a pint of the perfect of the operation on the fabric to a pint of the perfect of the operation of the perfect of th

Electricity on the Farm.
An interesting example of electricity as applied to farm work is now in opera-tion at a Scotch farm. The whole of the usual farm machinery, such as thrashing, sowing, corn thrashing, and the like, is here driven by an electric responsibility for her Bebts. Women were then often married in a single garment to relieve themselves of indebtedness. A young and noble German lady of the sixteenth century, to make assurance doubly sure, had the marriage ceremony performed while she was standing in a closet entirely divested of clothing. She put out her hand through the crack of the door, and was thus married. As soon as the ceremony was performed, the groom, clergyman and witnesses left the room, she came out, arrayed herself in clothes provided by her husband, and took her place at the marriage fort. Philadelphia Poerre

husband, and took her place at the marriage feast.—Philadelphia Record.

Transparent Leather.

This method of making leather transparent is given by a French journal: The hair has been removed is stretched upon a frame, and treated with a mixture of 1000 parts of glycerine, 2 parts of salicylic acid, 25 parts of boric acid, and two parts of picric acid. Before quite dry, the hide is taken to a dark room and saturated with a solution of bichromate of potash: and when it is very dry, an alcholic solution of tortoise shell is applied. The transparent leather is very flexible. It is useful for toilet with the C. P. R., for St. John, St. Stephen and all Western points; at Gibson with the C. P. R. for Woodstock, Houlton, Grand Falls, Edmundston and Presque Isle.

ALEX. GIBSON,

ARRIVAL.

Laster of Salicylic acid. 25 parts of boric acid, and two parts of picric acid. Before quite dry, the hide is taken to a dark room and saturated with a solution of bichromate of potash: and when it is very dry, an alcholic solution of tortoise shell is applied. The transparent leather is very flexible. It is useful for toilet articles, and might every be to the ordinary capacity, while its power may be readily increased to almost any extent. With an electric supply available at almost every street corner, as is now the case in most large cities, it would seem as if the steam fire engine must of necessity soon be superseded by its electric rival.

shoes, Which was attractive novelty.

FINE WORK MODERATE PRICES

NOTE—Messrs. F. & O. McGold-rick, with whom I have been contact of the street of the street on th droped that branch of business, I have opened a store on Regent St. and respectfully solicit the patonage of the public.

Yours etc.

A member of the Royal Meteorological Society has experimented on the size of rain drops, which vary from a speck so small as to be almost invisible up to a diameter of two inches. Drops of the same amount of water. Some of the lower side within the box, an outlet valve, and a bellows. It is designed to remove dust, previously loosened by beating, by exhaustion of the air where it is applied, thus drawing the dust from the material to be cleaned and discharging it into a receptacle or at a point exterior to the

Cost of British Defences.

Sir C. W. Dilke in the North American Review: The British empire spends as a rule upon defences from \$350,000,-000 to \$380,000,000 a year of which the military expenditure of India, with the indirect expenditure for the sake of India on the mobile land forces at home forms the largest item. Almost the whole of this vast sum is expended out A self-cleaning filter for cisterns, which obviates the use of charcoal and gravel, has just been placed on the market, The filter consists of a rectangular tin box, within which is a cut-off, and of British loans or taxes under the condependence.

He that does not know those things that are of use and necessity to know, is but an ignorant man, whatever he may know beside.

A secret is like silence; you cannot talk about it and keep it. It is like money; when once you know there is any concealed it is half discovered.

If you hate your enemies you will contract such a vicious habit of mind as by degrees will break out upon those who are your friends, or those who are indifferent to you.

A wise and good man will turn examples of all sorts to his advantage.

The side next the filter and so arranged that the water can be turned, by the use of the cut off, into the conductor, or caused to passed through the screens ten a separate outlet to the cister. The screens slope somewhat to ward the conductor at the side of the filter, to allow the accumulated filth to wash off and be carried to the ground. The cap covering the filter and conductor can be slid upto allow the screens to be removed. On the top of the cap is a collar corresponding in size with the down spout to which the filter is to be connected.—Iron A2e.

It is like in a true the filter, and so arranged that the water can be turned, by the use of the cut off, into the conductor, or caused to passed through the creen tain a fleet slightly superior to that of France, and an army of very small numbers, is a fleablite as compared (in its ill effect upon the wealth of the nation) with the military expenditure of Italy, or, in a less degree, with that of continental powers. The evidence of the overpressive of the cut off, into the conductor, or caused to passed through the creen tain a fleet slightly superior to that of France, and an army of very small numbers, is a fleablite as compared (in its ill effect upon the wealth of the nation) with the military expenditure of Italy, or, in a less degree, with that of continental powers. The evidence of the overpressive provides the conductor at the side of the cister.

The cap covering the filter is to be a collar to overpression with the discovered. Italy, and it may be assumed therefore Artificial Rubber.

Artificial India rubber from cotton seed oil is one of the latest industrial products, and claims to possess comvoices heard in insisting upon better voices heard in insisting upon better value for their money, the expenditure

> RIPANS TABULES.

> > RIPANS TABULES are compounded from a prescription used for years by well-known physicians and endersed by leading medical authorities everywhere. In the Tabules the standard ingredients are presented in a form that is becoming the fashion with becoming the fashion with modern physicians and modern patients everywhere.

RIPANS TABULES act gently but romptly upon the liver, stomach and atestines; cure habitual constipation, ispel colds, headaches and fevers. dispel colds, headaches and fevers.
One Tabule taken at the first symptoms of a return of indigestion, or depression of spirits, will remove the whole difficulty within an hour.
Persons in need of the Ripans Tabules will find the gross package most economical to buy. It is also in convenient form to divide up among friends. The above picture represents a quarter gross hox, sold represents a quarter gross box, sold for 75 cents. A single bottle can be had for 15 cents.

RIPANS CHEMICAL CO., 10 SPRUCE ST., NEW YORK. 

Of Providence, B. I., Widely known as proprietor of Derry's Waterproof Harness Oil, tells below of his terrible sufferings from Eczema and his cure by

Sarsaparilla Gentlemen: Fifteen years ago I had an atfollowed by eczema or salt rheum, breaking out on my right leg. The humor spread all over my legs, back and arms,

A Foul Mass of Sores, swollen and itching terribly, causing intense pain if the skin was broken by scratching, and discharging constantly. It is impossible to describe my suffering in those years of agony and torture. I spent

Thousands of Dollars in futile efforts to get well, and was discouraged and ready to die. At this time I was unable to lie down in bed, had to sit up all the time, and was unable to walk without crutches. I had to hold my arms away from my body, and had to have my arms, back and legs bandaged by my faithful wife twice a day. "Finally a friend who was visiting at our house, urged me to take Hood's Sarsaparilla. I began by taking half a teaspoonful. My Stomach Was All Out of Order

But the medicine soon corrected this, and in six weeks I could see a change in the condition of the humor which nearly covered my body. It was driven to the surface by the Sarsaparilla, the sores soon healed, and the scales fell off. I was soon able to give up bandages and crutches, and a happy man I was. I had been taking Hood's Sarsaparilla for seven months; and since that time, nearly two years, I have worn no bandages whatever and my legs and arms are sound and well. The Delight

of myself and wife at my recovery it is im-possible to tell. To all my business friends in Boston and over the country, I recommend Hood's Sarsaparilla from personal experience." S. G. DERRY, 45 Bradford street, Providence, R. I.
