—NEW—
PATENT PRESS BRICK MACHINE

The clay is prepared in the usual way, and used much stiffer than in a stock Brick Machine. Will work either strong or quick-sand clay; can be driven either by horse or steam power. The clay is pressed in the moulds, which are connected together, forming a revolving chain of moulds, lubricated with either oil, water or sand—the moulds passing through a tank or trough, which thoroughly lubricates them, so that the bricks leave the moulds perfect and smooth, being pressed on the revolving carrier, which extends any length on the yard. The brick is equal to any re pressed brick. The bricks are taken from the carrier and put on the chucks, requiring no man to sand the moulds, striker-off, or setting on the barrows, and the wheelers, which is a saving of three or four men. Capacity: No. 1, 8,000; No. 2, 16,000; No. 3, 24,000 per day, making a perfect pressed brick, superior to either stock or wire cut brick, which are apt to warp, and are difficult to cut.
