

THE LINN LOGGING TRACTOR

Designed and Developed for Winter Hauling, in the North Woods

Linn Tractor Hauling 62½ Cords of Mixed Spruce and Hemlock

The Canadian Lumberman of today is finding increasing difficult woods problems confronting him. His Hauls are each season becoming longer, and the efficiency of the horse, as a haulage factor, is in the same ratio, decreasing. The stream drive is expensive and troublesome.

Therefore—Reliable, Economical Mechanical haulage must be utilized. The only medium that will fulfill all the requirements of the Canadian Logger is the Linn Logging Tractor—designed and developed during the past eight years—exclusively for log hauling in the North Country.

During the past season, we had a very comprehensive motion picture taken—showing Linn Logging Tractors in operation over various limits.—If you have not already seen this film, we will gladly arrange to show it to you, in your own office.—It is a revelation of logging methods—and not a set and arranged picture.—It was taken over different operations, under ordinary working conditions.

We also have a very comprehensive catalogue about to come from the printers. Your request for a copy will be immediately honored.
