

THE KIDDIES.

Don't Give Them Only the Inferior Tools.

In some families it is always the blunt needle, the poor pencil, the broken comb, the worn-out clothes-brush, etc., that is reserved for, and

broken comb, the worn-out contes-brush, etc., that is reserved for, and thought quite good enough for the child to use? There is no time when good tools are so necessary as in the construc-tive period. A child learning to sew ought to be provided with just the right needle, neither too coarse nor too fine to thread, and a thimble that fits the little finger perfectly. It is unfair to be handicapped with poor tools. Even if the sewing is only for doily—it sewing, just the esame, and should have every encouragement so that it's done well. Then, how can one form the habit of keeping one's, small coat well brushed if the brietles of the brush are far too much worn to do their work properly? Of course the broken comb may do for small son to comb his hair, but it certainly is not very encouraging. Really, it is no wonder he escapes that threcome process quite as often as pos-sible.

A COLORED COLO sible. Sketching and coloring might be a great joy for many a budding little artist, if it were not for the poor lead pencil (that is always breaking) and the miserable penny crayons and five-cent water colors one is expected to produce masterpieces with! Then there is the toothbrush—little teeth need a good one to keep them clean and white. Yet many an un-

thinking mother buys a good quality toothbrush for herself and a cheap, poor one for her child. The same principle is often applied b the nursery. A little one is told to be neat and put its toys away when play is over-with really no adequate or conveniently arranged place to put them.

or conveniently arranged place to The so far wrong rule that anything is good enough for the child should be changed to quite the other extreme —that nothing is too good for the child. If in each case we will just stop a moment and really put ourselves in the childs place, a fair and square deal will result.

Minard's Liniment Relieves Neuralgia

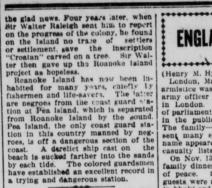

ROANOKE ISLAND.

Site of Raleigh's Ill-fated First Colony.

Off a desolate stretch of sandy beach in North Carolina lies Roanoke Island, the birthplace of Virginia Dare, the first English child born in America. Sir Waiter Raleigh was responsive for Roanoke Island being placed on the pages of history, for in 1585 he sent out a colonizing expedition to America, and fate and the rough winds of the Atlantic cast the ship up on Roanoke Island. On account if the elimate, the lack of food and the ub-iguitous Indian the island was voted as uninhabitable by the colonists, who packed their belongings and took the next ship back to England and civili-

But Raleigh was not discuraged. He sent out another colory, which consented to stay, and the man in charge of the expedition returned with

To be trustworthy an airplane propeller must be strong. Not only is it subject to gunfire, but its normal action makes heavy demands on its firength. The very speed of its revolution, tends to disrupt

speed of its revolutions tends to disrupt it, a test run of propellers made of wood which has been dried to the lowest possible moisture content, the end of the blades actually exueds sap which was forced out by centrifugal action, accord-ing to the Curtis Flyleaf. In tests, at least, it has been possible to speed the propellers up to such a pitch that outer end of the blade of an approximation propeller travels at the rate of 400 miles mome airplane engines run at 1.700 revo-lutions a mnute, and can be geared up to 2.000. An engine of this power would use a nine-foot-six-inch propeller and the speed of the blade ends would be in the neichborhod of 600 miles an hour. A good many thousands of pounds of do y this action alone and propellers have

TRAIPER CON

Henry M. Hyde, in Chicago Tribune.) Indon, Marcn 1.-At use time the armistice was first signed an American army officer was the guest of friends in London. His host is a member of parliament and a man of importance in the public life of Great Britain. The family-which is a large one-sent many sons to the war and the name appeared more than once on the casualty lists. On Nov. 13 the officer's host gave a for pactage of the officer's host gave a for pace. Some fifteen or twenty guests were at table, including several in khakit and blue. Towards he close of the dinner the American officer left his room. He was gone several min-ues. "I suppose," he told me." that quite

his room. He was gone several min-utes. "I suppose," he told me." that quite without meaning it 1 must have come back into the dining room without making the slightest noise. At any rate, when I entered every member of that big family sat silent with droop-ing head. As they looked up I saw tears in the eyes of more than one. Instantly my host was on his feet pro-posing a toast, To our gallant allics! They drank it standing with a smile on every face. "I felt that I had intruded on a sac-red privacy. Six sons of the family -one at Gallipoli, one in the Soudan. and four in France-had been killed. Into the gay dinner intended to cele-brate the final victory their memories had come. Though I was an old friend I was after all a stranger and the in-stant I appeared the private sorrow was banished. Nor during the re-mainder of my stay was the matter mentioned."

by no other veterinary standardization have made iable. The name, SPOHN'S, against DISTEMPER, PINK or COLDS in any form.

a doctor's certificate declaring that one is an invalid. Of course the British have practically no central heating. Steam heating plants, even hot air furnaces, are almost unknown. Even in normal times they dopend on coal fires in little grates which send nine-tenths of the heat straight up the chinney. And add to the low temper-ature the icy, penetrating sea logs and shroud London in arctic gloom and dampness! Nobody in Great Bri-tain could get even more than a most scanty coal ration-mot for one winter but for several! Even in handsome drawing rooms one sees ladies and gentlemen constantly rubbing their numb, blue hands, and politely pres-sing closer to the tiny grate fire. To you with your feet on the steam radiator the idea of a constantly shiv-ering Britain may have its humorous aspects. Actually the scarcity of fuel has done more than merely make peo-ple uncomfortable. It has, medical men say, seriously lowered the vitality of many people, particularly the scare, and those not naturally strong, and rendered then susceptible to the attacks of such diseases as the "flu" and resulting pneumonia, the third re-current wave of which this vear is now sweeping over the islands this month, with long and increasing lists of deaths. And the food. Even at his beat the British cook is no artist. He will roast a "joint." boil a potato, prepare sont of a sogsy bag pudding. Which meal will furnish plenty of sol-id and substantial nourishment, but that is about his limit. Imagine him with nothing in the way of raw materials but "offal." a little cormmeal, half enough wheat flour, a mere trace of butter, a few tagesponfuls of sugar, no fruit, a few slices of bacon from America so saity that if can hardly be swallowed! Conditions are selightly better now, but when I first came to London last December one went from one high priced hotel to another trying in vain to get a meal at once appeiling and satisfying. Even where good French chefs, were in charge and where one paid \$5 for a simple meal without wine, it was app

I consider MINARD'S LINIMENT the BEST Liniment in use. I got my foot badly jammed lately. I bathed it well with MINARD'S LINI-MENT, and it was as well as ever next day.

get laundry done, and it was favor of the greatest for any laundry to ac-cept a new customer. I have been in London the greater part of two months. One thing with which I am particularly struck is the fact that the faces of the great crowds of London are unsmiling. Almost al-ways the faces, particularly those of the women are drawn, and deeply lined. A face with even a trace of a smile is so rare as to be remarkable. I did-n't know the London crowd before the war, but people who did say there has been a great change in the last five years.

It is quite impossible for an Ameri-can to understand or appreciate, with-out coming to Europe, what the war has meant to the people of Great Bri-tain, France, and-dotbiless-to the inhabitants of the order countries which have not visited. It is equally impossible to be a witness of the way in which the English and French con-ceal their awful losses and hide their heartbreaks without the deepest sym-pathy and the warmest admiration for their magnificent courage. During the war more than 600,000 English boys-sons of these little is-lands alone-were killed in action or died of wounds. It may help Am-ericans to realize what that means to consider that if our losses had been proportionately as great we should be mourning the death of 1,350,000 of our sons! Two-thirds of all the great ar-my we sent to France would be to-day buried in French soll! Not a home in the United States. Figure it out for yourself and try to grasp the bit-ter contrat. Not only has aimost every family in these islands had to mourn the death of at least one soldier son-mot only has every mother had four years to go to bed nightly with the awful dread of what the waking might bring -but the conditions of living at home have been such as Americans can hard-ly imagine-let alone know by experi-ence.

We used to talk about coal famines: To one who has spent even part of a winter in London what we call coal famines in America are a joke. Here in London in January, with the ther-mometer at 15 degrees above zero, it was almost impossible to get a fire in a bed room at all except by virtue of
