The distance from south extending into the Edmonton country, Eng. extensive vineyards which formerly existed to north in which cereals may be cultivated lish two-rowed barley can be grown with there. In Ontario mildew is not a formidable enemy, it is easily combatted and rare-

ly is at all injurious. In fact it may be said that in the southern part of the province the vine is the most certain, and least irregular in returns of all the fruit crops grown. Free from the early September frosts which trouble the Rhine valley; a full month later in the advent of cloudy or rainy fall weather, which often interferes with the maturing and quality of the grape in middle and northern Europe, and without the necessity and expense of irrigation entailed on the grape growers of southern California, southern Ontario has a capability for grape growing that may well challenge the world. It is no wonder, there fore, that wine making has developed within a very few years to a considerable industry; that thousands of acres are now planted in vineyards and many hundreds of thousands of gallons of claret and other wines are an nually manufactured. FRUIT IN BRITISH COLUMBIA.

The possibilities of British Columbia in fruit culture are very great. The mild coast climate permits of the civilization of all the fruits of eastern Canada and several others besides. On the Dominion Experimental farm at Agassiz the fig tree, the almond and the pomegranate are grown. In the interior valleys, behind the Coast range, the winter cold puts limitations on the cultivation of some fruits, but the summers are much warmer than on the coast, and the couditions tend to secure a better flavor in the peach, apple and other fruits. At Spence's Bridge in the Thompson valley, which may be taken as a type of considerable stretches of river valleys in the interior, the month of April is as warm as a Toronto May, and July is even warmer than at Pelce in Ontario

Joker's Corner.

A certain young lady who lives in the West End has her romance spoiled by the un-called for and gratuitous interference of a glutonously inclined goat. This young lady had a handsome beau who had who had proposed to her. Her parents objected to the match and forbade the young man to call on his heart's idol. The young lady was desperate, as eligible beaus are not to be found in the suburbs. They resolved to elope. The young man was to be under his lady love's window at daybreak and signal by means of a cord. It is almost needless to state that the other end of that cord was attached to one of the large members of the maiden's pedal extremities. The goat did not rest that night and was wandering about the yard at an unreasonably early hour in the morning. After masticating all the sardine boxes and empty tomato cans he discovered the pendulous cord and resolved to take it in as a dessert. When the cord

was drawn taut the goat reared up on his hind legs in an effort to follow it up the side of the house. He found that his efforts pork back into the gravy, let it simmer a jerk. Then the trouble began. The maid awoke. The goat gave another violent pull GREEN PEAS IN CREAM.—Put a quart of that was almost as effective as that exercised with flour, and put in the gravy that was left and a little hot water: about a cupful of gravy is enough for a dish holding three into the darkness: "If you don't stop pullints. Cover the top with a crust made of | ing like that, Augustus, I won't come down our with one teaspoonful of baking powder at all." Another savage jerk and a wail of sifted through it; add a piece of butter half the size of an egg, rubbing it into the flour; ruby lips. The cry was heard by her of the centre of the crust, put it over the The maid fainted, the elopment was killed
