

INFLAMMATION

"The succession of definite changes occurring in a living tissue when injured, provided the injury is not sufficient in degree to at once destroy the vitality of the part."

OR "The succession of changes occurring in a living tissue from the action of pathogenic microbes or their ptomaines."

Take either view of the condition, it is the only indication for the use of

ANTIPHLOGISTINE

Turn to your text-book on surgery to-day and refresh your memory upon what constitutes "the succession of definite changes"; also note, if you please, the condition of the circulation in the part affected; then remember

ANTIPHLOGISTINE

Is the most approved method of counteracting these varied abnormal conditions whether they exist in deep-seated organs or superficial structures. If you believe in moist heat, venesection, cupping, hot stupes, blisters and other methods of counter-irritation, lay aside all prejudice and take up Antiphlogistine. It combines all the good features of the barber-surgeon methods just mentioned and produces definite results in a definite manner—no irritating, depressing, annoying or disagreeable after-effects, yet positively effective.

ANTIPHLOGISTINE

When applied warm and thick over the affected area, immediately energizes the adjacent tissues, stimulates the cutaneous reflexes, coincidentally causing contraction of the deep-seated and dilatation of the superficial blood-vessels. Extension of infection is at once prevented. The overworked heart is relieved by lessened blood-pressure and pain in the congested district is diminished. Normal conditions are soon restored

Always prescribe a full package

Small, Medium, Large, or Hospital Size,

and thus insure obtaining Antiphlogistine in perfect condition
