

"A new and highly valuable publication, intended for a school book, but which will be found equally interesting and important for all to study. . . . Such a work as this has long been a great desideratum, and we rejoice that a want so strongly felt, has now, at length, been so well and so completely supplied."—*Boston Atlas*.

"The work is admirably adapted to the use of schools and colleges, and ought to be made a study in all our higher seminaries, both male and female."—*New-York Observer*.

"To the testimony which is furnished by their distinguished scholarship, we may add, however, that the classifications of the work are so admirably arranged, and its descriptions given with so much simplicity and clearness of language, that the book cannot fail of its practical aim—to facilitate the progress of the beginning student. It is a work for schools."—*New-York Recorder*.

"The announcement of this work some time ago, as being in a course of preparation, excited a high degree of interest among teachers, students, and the friends of science. The names of its authors gave ample assurance that it was no compilation drawn from other works no mere reconstruction of existing materials. The work will undoubtedly meet the expectations that have been formed of it, and already it has been adopted as a text-book in several colleges. It breaks new ground; as is said in the preface, 'some of its topics have not been touched upon in the language, unless in a strictly technical form, and in scattered articles.' The volume exhibits throughout great labor and care in preparing it for the public eye, and for the use of students. As it has no rival, we suppose its adoption will be almost universal in literary institutions, and it will do much to awaken in the minds of multitudes an enthusiastic love of natural history."—*Christian Reflector & Watchman*.

"This is entirely a new field in American elementary literature, no similar treatise existing in this country. At first sight, the work appeared to us too abstruse for beginners, and for the use of those whom the authors aim to benefit—the scholars in our common schools. A more careful examination convinces us that any teacher or scholar, who is in earnest to understand the subject, will find the application necessary at the commencement comparatively trifling, while the subsequent benefit will be immense. This is the first volume of the work, and is devoted to Comparative Physiology, on which branch it is exceedingly complete. It is freely illustrated with the necessary wood cuts. The names of the authors will be a higher guarantee for scientific accuracy than any judgment we might pronounce."—*New-York Commercial Advertiser*.

"It is designed chiefly for the use of schools and colleges, and as an epitome of the subject on which it treats, contains more in a small space, than any book of the kind that has yet fallen under our notice."—*Saturday Gleaner, Philadelphia*.
