

thickness. Along with organic remains of animals, similar to those found at Big Bone Lick, were skeletons of men in great numbers. Among others, was that of a man standing erect in the earth, one arm raised to an angle of forty-five degrees with the shoulder, and holding in the hand a semi-globular, or rather elliptical stone, striated with gay colors, beautifully polished, and of the size of half an orange. When those perforations and examinations into the interior strata of the soil, which every where take place, consequent upon habitancy and improvement, shall have been made, we doubt not that innumerable testimonials to the past habitancy of this country, like those recited above; will come to light. Such remains cannot fail to elicit profound reflection and solemn thought. But it is out of the question to think of deriving from them any theories or conclusions more specific than that the country was formerly inhabited by races of animals, most of which are now extinct; and by races of men, in form and structure like ourselves.

---

### CHAPTER XIII.

#### BRIEF NOTICES OF SOME OF THE WESTERN PIONEERS.

AFTER all, our most interesting remains are the transmitted examples and characters of our hardy pioneers; of whom but a very few now remain.

From a near relative of Daniel Boone, we are enabled to add a few facts, in relation to his life, in addition to those that have already been recorded in this work; and which dates subsequent to the period of his leaving Kentucky.

Boone was a man of the keenest sensitiveness; and, it is said, used to show great satisfaction at hearing any one read the flattering and rather exaggerated and sophomorical account of him, which, as original and authentic matter ap-
