### WONDERS OF WIRELESS SCIENCE

Already within man's grasp, and waiting only the processes of perfection are a number of inventions that will revolutionize social life. The principles have been discovered, nothing remains but detail. Science promises more wonders within the next quarter century or so than have been revealed in all ages preceding us. The poet cannot dream what cool thinking mechanicians propose. It is likely that most of our present machinery will go on the junk pile, and a complicated industrial fabric be discarded for a new direction, where a short cut in the path of progress. No more a gradual development, but a swift leap in a new direction, where all conditions are totally different. The economical notions of modern statesmen, who worry about depleted forests and coal mines, may seem absurd when the race has no use for as much wood as is contained in a tooth pick, and is satisfied to glance at a few jumps of coal kept in a museum.

The government statistics of the future, reporting the wealth of the nation, will not list such crass articles as railroads, mines and factories. Probably they will not even dwell on the value of machinery, so simple and cheap will be the means of tapping nature's storehouse. It might be stated that we had sun power worth \$1,786,520,000,000 last year, \$19,452,748,413 of food nitrogen, from the air, so many millions dollars in heat from the ocean waves and the centre of the earth, so many trillions of electric power from the universe in general—or it might be simpler to report the available wealth "unlimited." Perhaps Mrs. Will offer a market for a little of the surplus. An inter-universe commerce forestadows a cosmic trade war, that may jolt the solar system from its bearings.

While we dithered with the thermometer in the 90's last summer, when a scientist sent aloft a kite and found that the temperature a few miles up was many degrees below zero. The people needed this cool climate while the bungled with fans and chunks of ice. Some day an inventor will find means to tap the unlimited reservoir of frigid air so conveniently located in the sky, and the summer streets of our cities will be cooler than the loftiest mountain resort. But if there is Arctic temperature available above for use in summer, there is also an inexhaustible power and heating plant under our feet for winter utilization. Let the earth's heat beneath any northern city be tapped and the winter climate of cold equal Florida. Whirling snowflakes would turn into rain before they reached the asphalt.

### POWER THROUGH AIR

A hundred developments of the wire-

ASEPTO makes clothes whiter, fresher, cleaner, than any soap can make them. Sterilizes everything it comes in contact with—is perfectly odorless. For washing clothes, bedding and various fabrics, dishes, pots and pans, use one tablespoonful of ASEPTO to a bucket of water. After the wash, pour the wash-water into the sink—and sink and drain pipes will be completely disinfected, invaluable in cases of infectious diseases, as ASEPTO kills all disease germs present in the bedding and dishes used in the sick-room. ASEPTO costs but 5 cts. a package—but when compared with ordinary washing compounds ASEPTO would be *dead cheap at double the price.*

ASEPTO has been analyzed by eminent physicians and found to be all we claim for it.

### WILL CONFER WITH BRODEUR

Fishing in International Waters

Brodeur Will Thrash Out Subject With Provincial Government Members

OTTAWA, Feb. 15.—Hon. Dr. Reame of Ontario, Hon. C. R. Doherty of Quebec, and Hon. Mr. Brodeur of New Brunswick, representing the fisheries department of the three provinces, will confer with the federal minister of fisheries, Hon. L. P. Brodeur, respecting the regulations for fishing in international waters. The federal government alone has jurisdiction in the matter of drafting regulations governing the protection of fisheries. Hon. Mr. Brodeur is desirous of securing the views of the provincial representatives before Canada gives consent to the new uniform regulations which will govern the fisheries of the boundary waters under the provisions of the treaty.

### New Drafting Regulations

The two commissioners now drafting the new regulations for the fisheries of the international waters of the St. Lawrence River, the St. Croix and the St. John rivers in New Brunswick, Lakes Champlain and Memphrango in Quebec, the St. Lawrence River and the Great Lakes, with Fishy River and Lake of the St. Lawrence, Ontario, and the international waters of British Columbia, Georgian Bay and Lake Michigan will be met in conference with the provincial representatives of the fisheries of the three provinces, before the regulations are finally signed, which will probably not be for several months yet.

### New Brunswick Waters

The new uniform regulations will cover the international waters of the St. Lawrence River, the St. Croix and the St. John rivers in New Brunswick, Lakes Champlain and Memphrango in Quebec, the St. Lawrence River and the Great Lakes, with Fishy River and Lake of the St. Lawrence, Ontario, and the international waters of British Columbia, Georgian Bay and Lake Michigan will be met in conference with the provincial representatives of the fisheries of the three provinces, before the regulations are finally signed, which will probably not be for several months yet.

with every battery and skillful time in action plaitly depicted on screens of white cloth. He will probably care to hear the reverberations of the cannon, the yells of the living and the groans of the dead. However, should not be thought that they were the regulations which would be finally adopted.

### POCKET TELEPHONES

Every citizen will soon carry a pocket telephone. The inventor of the wireless invention, has a three-ton electric truck in the shops of the Union Pacific Railroad. It might be stated that we had sun power worth \$1,786,520,000,000 last year, \$19,452,748,413 of food nitrogen, from the air, so many millions dollars in heat from the ocean waves and the centre of the earth, so many trillions of electric power from the universe in general—or it might be simpler to report the available wealth "unlimited." Perhaps Mrs. Will offer a market for a little of the surplus. An inter-universe commerce forestadows a cosmic trade war, that may jolt the solar system from its bearings.

Torpedoes and trains can be guided and controlled by a fleet of battleships in the ocean could be manoeuvred by a strategist sitting in his office on land. The strategist could even aim and fire the guns on the other side of the equator. If he obtained the secret of the enemy's wireless attachment he could perhaps reverse their propellers, explode their magazines or drive them together to be wrecked. The Napoleon of the future will seem to be playing an organ while he is directing the carriage of an army over a hundred-mile battlefield.

The wireless "phone" and telegraph together would enable Parliament to hold its session without ever coming within a thousand miles of Ottawa. Every legislator, not reluctant to save his mileage allowance, would sit comfortably at home while listening to the debate and watching the faces of his fellow legislators. He could rise to a point of order, whisper to his friends, deliver an impassioned oration, ask for a little private bill, and perhaps take a convivial glass, all without moving from his rocking chair.

The theatre and the opera, as they are constituted at present, are likely to pass away. Performances will be enjoyed by subscribers at their own homes, and casual patrons will see and hear through numerous public machines in hotels and drug stores. A special cabinet will be provided for engaged couples who wish to go to the theatre. There are unlimited applications of the "phone and picture" machine in war correspondence, the purchase of criminals, voting, buying hats

## The New Wash Goods Season 1909

The Newest Materials for Popular Coat Suits.  
Imported Zephyr Gingham of entirely New Designs and Colorings.

### "Hydegrade" Suitings

New American wash goods so much advertised in the magazine, Ladies' Home Journal, etc. Especially for coat suits. Comes in pretty stripes or plain colors.

22c. yd

### Fine Imported Gingham

Beautiful effects in the best Scotch Zephyr with broad mercerized stripes. New colorings in two tone effect.

25c. yd

### Decca Duck Suitings

These come in all sorts of coating stripes, Greys, Blues, Browns, Cockeyes as well as plain Khaki shades.

15c. yd

### English Coating Ducks

Remarkably attractive striped wash goods in two-tone effect on white ground; also for coat suits New Browns, Greys, Copenhagen Blues, etc.

20c. yd

### Linen Pongee Suiting

Almost like heavy Pongee silk. Highly mercerized linen and comes in beautiful plain colors. Tan, Copenhagen, Moss, Pearl Grey, Helle, Reseda, Tuscan, etc.

28c. yd

### Cordon Suiting

A new make of suiting in self colors. Perfectly fast in washing. Comes in Reseda, Ebor, Copenhagen, Tan, Cadet, Brown, Navy, etc.

15c. yd

### New White Goods in Great Variety

New White Mercerized Piques.  
Fancy White Merc'd Stripe Coatings.  
Mercerized white Linen Suitings.  
Fine Imported White Ducks.  
Popular "Indian Head" Suitings.

New Fancy White Muslins.  
Fine Mercerized White Lawns.  
White Swiss Spotted Muslins.  
White Organdies—Special.  
White Swiss Allovers.

### KANEKO'S FRIENDS

TO FORCE INQUIRY

Japanese House of Lords Will Probably Find Out Why Exposition Was Postponed.

By the use of the Gray telegraph a man in London will soon write cheques in New York. This apparatus sends handwriting through the air. Two silver threads attached to the point of a pen cause a reproduction of every curve and dash of the signature. The illustrations given above the general at home could send instantaneous telegrams to the postmaster of the International Exhibition from 1912 to 1917 and these questions will, of course, come up in the House of Lords, and not in the lower house. A great deal of quiet canvassing has been going on among the friends of Viscount Kaneko, who was displaced as Director General by his own resignation. It is true, but the resignation was necessitated by the action of the present government.

There is a rather interesting political situation involved in the controversy. Kaneko and his friends feel that the Viscount has been rather severely handled and that while the postponement of the exhibition must have been a matter of necessity it might have been done with a little more "armour" proper of Viscount Kaneko, who was very much hurt indeed when the postponement was announced without his having been consulted at all.

Viscount Kaneko insisted that the exhibition might have been held just as well in 1912 under the plans he had in view and that the new administration acted in bad faith with him. It will be asserted in the Diet that a constitutional question is involved and that the Diet having set the exhibition for 1912 the postponement by the monarch, on the advice of his Privy Council and the Cabinet, was a violation of the constitutional rights of the Diet and of the people. Just what form the matter will take it is, of course, difficult to say, but it is probable that a resolution condemning the action of the government will be introduced. Viscount Kaneko is himself a member of the House of Lords and has a fairly strong support.

### KONGO NATIVES AND THEIR DEAF

"In the matter of preserving bodies for burial Kongo, after the usual binding in cloth, keep them for two or three months in their houses, where a fire is kept burning, but in Zombi they are suspended on two forked sticks in a dugout vase in the ground which is covered over with palm branches and earth," says a missionary. "Sometimes the body is placed under a specially built grass roof in the open. This is not considered a burial, and for some years they brought out for a big funeral feast and dance the body of an important chief that had been preserved for over twenty years. In other districts the dead are thrown away into a river or into the bush to be devoured by jackals and vultures."

### SELF HELP.

Dashaway—Well, Uncle Jasper, how are you getting on with your Christmas dinner?  
Uncle Jasper—Just rate, sah. Colonel Winterblossom done give me a present of a fine fat turkey, sah.  
Dashaway—That's very strange. I just left the Colonel and he didn't say anything about it.  
Uncle Jasper—No, sah. He's got to count dem turkeys first.

### FAIL TO REACH AN AGREEMENT

McArthur and McVey Suit Proceeds

### BOARD MEETS

Powell Present, but Offers Nothing That Satisfies Aldermen

After a somewhat lengthy discussion at a special meeting of the Water and Sewerage Board held yesterday afternoon it was decided to proceed with the McArthur and McVey suit, which is now in process of hearing before the Supreme Court at Fredericton. It is understood that every available means of securing a settlement mutually satisfactory to the parties involved was considered before the final decision was reached.

The board occupied the greater part of the afternoon in discussing the case. It is not known upon what basis Mr. Powell agreed to enter into settlement with the city. The agreement, it is understood, are concluded that the city can win out.

The meeting of yesterday afternoon followed a meeting of the Water and Sewerage Board held in the morning, when a committee consisting of Ald. Soule, Frank McDowen, McCordale, Basil, Baxter and Brown, was appointed to go into the matter.

During the prolonged meeting of the Water Board, the Harbor Facilities Committee did not meet, as arranged. It has been suggested that for this session at three o'clock.

### MEETING CALLED TO CONSIDER ESTIMATES

But School Board Adjourns After Passing a Few Minor Amounts

Other than passing upon a few minor amounts, nothing was done at the special meeting of the School Board held last night.

The meeting was called for the purpose of considering the estimates for the coming year. The members of the board thought, however, that they were without sufficient information in the matter and action was deferred until Tuesday of next week, when another meeting will be held.

The estimates passed upon last night had to do with apparatus and supplies, the larger matters of increased teachers' salaries and a new chemical laboratory being held over.

R. B. Emerson presided at the meeting, which was attended by all the members of the board except J. V. Russell.

### NEW WORLD'S RECORD FOR HOSE COUPLING CONTEST

GLOUCESTER, Mass., Feb. 15.—What is believed to be a world's record for an old-fashioned crank-coupling hose contest of 155 feet was made by John E. Kelley and Thomas A. Skid, of engine No. 3, South Framingham, here tonight, when they completed the test in 12.5 seconds. The former record was 12.5 seconds made here last winter. In fulfilling the conditions of the match the men were forced to dress themselves in boots, trousers, coat and hat after rising from a bed, 50 feet from the coupling. After coupling, it was necessary to run a distance of 85 feet.

### Palpitation of the Heart.

One of the first danger signals that announce something wrong with the heart is the irregular beat or violent throb. Often there is only a fluttering sensation, an "all gone" sinking feeling; or again, there may be a most violent beating, with flushings of the skin and visible pulsations of the arteries. The person may experience a smothering sensation, gasp for breath and feel as though about to die. In such cases the action of Milburn's Heart and Nerve Pills in quieting the heart, restoring its normal beat and imparting tone to the nerve centres, is beyond all question, marvellous. They give such prompt relief that no one need suffer.

Mr. Sylvester Smith, Hampton, N.B., writes:—"I was troubled with palpitation of the heart and tried doctor's medicines, but they only gave me temporary relief. I heard of your Heart and Nerve Pills and bought two boxes and before I had used them I was completely cured and would recommend them to all similarly affected."

Price, 50 cents per box, or 3 boxes for \$1.25 at all druggists or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.
