PALE ANAEMIC YOUNG WOMEN. Anaemic, or thin, watery blood, is increasing—to an alarming extent among the school girls and young women of our land. Pale gums, tongue and eyelids, muscular weakness, inability for exertion, deficient appetite, impaired digestion, short breath, palpitation of the heart, attacks of vomiting, swooning, hysteria, and irregularities of the feminine organs are among the unmistakable symptoms of anaemia or poor quality of blood.

Anaemic persons are frequently said to be going into a decline, and as a fact do usually contract consumption or some fatal constitutional disease if they neglect to restore normal vigor. Fresh air, sunlight, moderate exercise and the regular use of Dr. Chase's Nerve Food after each meal will restore new vitality to the body and new color to the cheek of any anaemic person. Gradually and thoroughly it forms new red corpuscles in the blood and wins back perfect health and strength.
