most injury is apparent, or when the average citizen wakes up to the necessity of doing something. The life history of the pests must be known in order that treatment may be given at the right time. Besides, to spray trees of considerable size requires an apparatus which the average citizen cannot be expected to have.

The injury to trees by borers is a case in point. The foliage does not

show the effect of the damage nor do the limbs begin to die until three or four years after the caterpillars of the borers do their fatal work. Then the people wonder why the trees are dying. Hundreds of sugar maples died in the northern section of the State of New Jersey during the years of 1905 and 1906 as a result of the ravages of the borers a few years before that time. Attention to them at the time the insects were active would have saved the trees.

We cannot blame the individual for unsatisfactory results. We are seeking in the planting of shade-trees that which is for the common good of all, and we expect the work to be done by the citizens without instruction, without system, and leave to each one, if it so pleases him, to do his share when and how he desires. It is the system that is wrong, and the remedy can readily suggest itself. Other municipal interests are vested in commissions, committees, or other organized bodies. Experience has shown that in order to obtain the greatest degree of excellence in the planting and care of street-trees, the matter must be entrusted to a similar body, and a shade-tree department should be incorporated in every municipality.

It is only when the planting and care of street-trees is vested in a special department that all the principles essential to secure the most stately and impressive effect of highway planting can be applied.

Bureau of

Canadian Information

THE Canadian Pacific Railway through its Bureau of Canadian Information, will furnish you with the latest reliable information on every phase of industrial and agricultural development in Canada. In

the Reference Libraries maintained at Montreal, Chicago and New York, are complete data on natural resources, climate, labor, transportation, business openings, etc., in Canada. Additional data is constantly being added.

No charge or obligation attaches to this service. Business organizations are invited to make use of it.
