

THE FARMER'S TOOLS

PLOUGHS, Hoes, Shovels, Harrows and such like are not the only tools that the farmer needs. He cannot do without these, certainly, but he quite as certainly can do even better with some other tools as well. These other very useful tools are books—books that treat of various phases of modern farming.

No intelligent farmer to-day denies the value of a reliable book of reference on farming. Farmers some years ago used to laugh at "book farming," as they chose to call it; but the intelligent farmer of the present day doesn't, and for two reasons—first, better books are being written nowadays; and second, the farmers who are making the greatest success of their work are the ones who read up about it. They realize that books are worth while.

THE FARMER'S BOOKS

Other workmen need books—why not the farmer? The engineer, the carpenter, the land surveyor, all have their books and find that it pays to read and study them. Is the farmer's work any less important or less in need of up-to-date information? There is a farm science as truly as an engineering science, and it pays the progressive farmer to know about it. A very small outlay in good, reliable farm-books will bring profitable returns.

Some Books It Will Pay You to Read
