## Our Legal Adviser

**MAINTENANCE OF LUNATIC**—If a  
person over the age of 21 years is sent  
to the asylum, do the parents have to  
pay his keep after all the first party's  
money is spent?—G. C. Norfolk Co., Ont.

The parents of a lunatic over the  
age of 21 years committed to a public  
asylum are not liable for his  
maintenance except in so far as they  
may have bound themselves by con-  
tract to provide for the same.

**OWNERSHIP OF FARM**—If a person  
comes to live on my farm, and remains  
there 10 years without paying me anything  
for rent, or anything that a Court would  
construe as rental, would that person then  
own the farm? What should I have re-  
ceived from that person who has made  
good?—L.M.S., Stantested Co., Que.

In Ontario the law provides that  
any person must bring an action to  
recover any land within 10 years next  
after the time at which the right to  
bring such action first accrued to him  
or to some person through whom he  
claims. If, therefore, the true owner  
of the land permits any other per-  
son to occupy land without paying  
rent therefor, or acknowledging  
the owner's title, the owner would

set out in the inquiry, and may re-  
move straw or manure from the prem-  
ises.

## Food Value in Thin Hulled Oats

As oats are the leading grain crop  
in Ontario and the bulk of them are  
fed to stock on the farm, the farmer  
should be doubly interested in grow-  
ing those which possess the highest  
food value. There is a variation of  
from 20 to 50 per cent. of husk be-  
tween varieties. When we consider  
that husk, or hulls, have practically  
no feeding value we can see the im-  
portance of growing a variety having  
a thin hull.

Oats with 20 per cent. hull means  
that every bushel contains 27½ lbs. of  
kernel and 6¼ lbs. husk. Other vari-  
eties with 50 per cent. hull, have only  
17 lbs. kernel—a difference of 10½ lbs.  
a bushel. Knowing the high value of  
oatmeal as a food for man and beast  
—better than wheat or barley meal,  
and nearly as good as peas—we cannot  
fail to see the great difference between  
the two in actual value. Taking oats  
at 40 cents a bushel there is a differ-  
ence of 15 cents a bushel in favor of  
the thin-hulled variety.

Taking the average of 10 acres on

# Do You Grow BARLEY ?

If so grow O.A.C. No. 21. It  
is the best. Our price while  
the stock lasts in 5 bus. lots  
or over is \$1.10 per bus. Bags  
free.

## OF OATS

In this day of intensive farming it  
has become absolutely necessary to  
secure the largest possible return  
from the land, and as Oats have  
become the most important and  
valuable crop, special attention  
should be given to the selection of  
seed. Herewith find our prices for  
splendid proven varieties.  
Prices are L.O.B. Toronto, in 5 bus.  
lots or over. Bags free.

## Kordyke Queen Pieterje, No. 5371

This Holstein cow Kordyke Queen Pieterje, owned by A. D. Foster, Bloomfield,  
Ont., has just completed a seven day record of over 20 pounds of butter. Her  
daughter Kordyke Pieterje Keyes has a record as a three year old of 12½ pounds  
butter in seven days; she also has a 19 months' record of 13,330 pounds milk and  
\$16.18 pounds butter. She is to be sold in the Breeders' Consignment Sale at Bel-  
levue, April 7th. A son of Queen's will also be sold at this sale. See Gossip notes  
for other particulars in regard to Mr. Foster's offerings.

become barred after 10 years' ad-  
verse possession by the other party.

The claim of the true owner may  
be kept in force by the payment of  
rent or by obtaining an acknowledgment  
in writing of his ownership  
from the party in possession, and the  
true owner would have the right to  
bring such action first accrued to him  
within 10 years from the last pay-  
ment of rent, or the last written ac-  
nowledgment of title. The law is  
substantially the same in the other  
provinces of Canada.

**REMOVAL OF MANURE**—A man having  
a small place rented, so small that he  
could not grow sufficient fodder to main-  
tain more than one or two head of stock.  
He decides to keep a small dairy herd.  
Has the tenant the right to sell or ex-  
change the land for manure over him for  
having exchanged the manure for straw.—  
A.J. York Co., Ont.

The right to sell or exchange manure  
or straw from the premises de-  
pends upon the language of the lease.  
If the lease is on the usual printed  
form it will probably be found to con-  
tain a provision preventing the re-  
moval of manure or straw from the  
premises. If the lease exists by vir-  
tue of a verbal agreement it may have  
been expressly provided in such agree-  
ment that there should be no such re-  
moval, but unless the removal is re-  
stricted by the terms of the lease the  
tenant is quite free to act in the way

each 100 acre farm, with a yield of 40  
bushels to the acre, we get in a thin-  
hulled variety two tons more nutriment  
than in a thick-hulled one. This being  
so, is it not worth our while to see that  
this is the only advantage. Heavy hull  
varieties are not heavy yielders. In our  
experience they do not yield as  
well as the light hulled varieties; be-  
sides they require more moisture to  
germinate them. This tells against  
them in a dry spring, and for this  
same reason seed grains will often  
germinate before fall plowing and con-  
spiring to the detriment of the succeeding  
crop.

A thin-hulled oat is known by its  
wide open bosom. Lay a kernel with  
its oval side downward, the bosom  
will then be up. There should be a  
good space with only a film over it.  
In a coarse oat the opposite will be ob-  
served. We cannot name varieties—  
they are far too numerous, and we ex-  
pect some varieties have many differ-  
ent names. The Banner, Abundance,  
Siberian, Lincoln, and Thousand Dollar  
are among the best, while Tartar  
Early Godland are among the objec-  
tionable varieties, because while they  
weigh, look and handle well, the nutri-  
ment is not in them.—Report of Agri-  
cultural Societies.

It pays to advertise. Try it.
