

SUFFERED FROM BACKACHE RHEUMATISM, DROPSY.

Dear Mr. Editor—I wish to tell you of my recent experience I had when suffering from backache, weak back, rheumatism, dropsy, and congestion of the lungs. I tried a new medicine called "Anuric," which has recently been discovered by Dr. Pierce, of whose medical and Surgical Institution in Buffalo, N. Y., you have no doubt heard from me. This medicine acted upon me in a wonderful manner. I never have had any medicine so helpful in such a short time. I do wish anyone in need of a remedy would give it a trial. (Signed) G. H. HERR.

NOTE: Folks in town and adjoining towns are delighted with the results obtained by using "ANURIC," the latest discovery of Dr. Pierce, who is head of the "INVALIDS' HOTEL and MEDICAL INSTITUTE," in Buffalo, N. Y., where he started the day with a backache, stiff legs, arms and muscles, and aching head (worn out before the day began because they were in and out of bed half a dozen times at night) are enjoying the perfect rest, comfort and new strength they obtained from Dr. Pierce's Anuric Tablets. To prove this is a certain uric acid solvent, conquers headache, kidney and dermal diseases and rheumatism, if you never used the "Anuric," cut out and send ten cents to Doctor Pierce for a large sample package. This proves to you that "Anuric" is seven times more active than in eliminating uric acid—and the perfect kidney and bladder correct. If you are a sufferer, go to your druggist and ask for a 50-cent box of "Anuric." You run no risk for Dr. Pierce's good name stands behind this useful new discovery as it has for half a century for his "Golden Medical Discovery" which makes the pure, his "Favorite Prescription" for catamenial and "Pleasant Pellets" for ill.

MAXWELL
Most Miles per Gallon Most Miles on tires

We used to say:
"The Maxwell's real greatness is on the inside—the mechanical parts you can't see."
But the wonderful new 1918 Maxwell has just been delivered to us.
Now we've changed our tune.
Today we say:
"The Maxwell is great inside and out—great in EVERY POSSIBLE way."
Always the most efficient—most economical light car built, the Maxwell now has:
A 6-inch longer wheel base, making it larger and roomier.
Heavier and more rigid frames—6 inches, instead of 3 inches deep—and yet is 50 pounds lighter.
Compensating underslung rear springs—the last word in spring suspension at any price.
A sloped windshield—style of body equal to the highest priced cars.
Friends, the 1918 Maxwell is the best looking, best built car for the money we ever saw!

Touring Car \$1045
Roadster \$1045; Coupe \$1540; Berlin \$1540;
Sedan \$1540. All prices f. o. b. Windsor

CONTROLS PULP SITUATION.
Canada Stands as Dictator in Important Industry.

Canada is declared to be the dictator in the pulp situation. Reports from all quarters indicate a big boom in the industry. As it is freely claimed that the world's supply depends almost entirely on the Canadian output, the statement of the Forestry Branch at Ottawa will be of interest. The total consumption of Canadian pulpwood, in cords, is as follows:

Year.	Cords.	Total value.
1908	482,777	\$ 2,931,653
1909	622,129	3,464,080
1910	598,487	3,585,154
1911	672,288	4,238,024
1912	866,042	5,215,582
1913	1,109,034	7,243,368
1914	1,224,376	8,089,868
1915	1,405,886	9,426,217
1916	1,764,912	13,104,458

Of the five Provinces engaged in this industry, three greatly increased their production, and two fell behind last year. Those which increased in production were Quebec, Ontario, and British Columbia, and those which showed decreases were New Brunswick and Nova Scotia. This change brings British Columbia back into third place, which it occupied in 1914.

As in the past, spruce heads the list of the different kinds of wood used with 68.2 per cent. of the total, followed by balsam fir with 24.5 per cent.

The Canadian pulp mills in 1916 consumed for the manufacture of pulp in Canada 1,764,912 cords, valued at \$13,104,458, while 1,068,207 cords, valued at \$6,866,669, were exported, making a total production of 2,833,119 cords, valued at \$19,971,127. This represents an increase of 25.5 per cent. in pulpwood production and 8.1 per cent. in total value as compared with 1915. This great increase is due to the tremendous demand for pulp and paper caused by the war conditions of the preceding two years. The average value of pulpwood at the mill increased 71 cents per cord over that of 1915. All the Provinces show increases in the value of pulpwood except Ontario and British Columbia.

Approximately 1,296,084 tons of air-dry pulp were made in Canada in 1916. This is on the basis that one cord of wood produces one ton of ground-wood pulp or one-half ton of chemical fibre. This is a total increase of 20.6 per cent. over 1915. The increases shown by the different processes were: ground-wood pulp, 11.2 per cent.; sulphite process, 54.6 per cent.; sulphate process, 9.3 per cent.; and soda process, 12.1 per cent. Spruce and balsam fir are used in all provinces and in all processes. Hemlock and poplar are not reported from New Brunswick and Nova Scotia. Jack pine was used only in Ontario and Quebec, and most of it was used in the sulphate process.

In regard to the process by which the wood is converted into pulp, it is noted that while the mechanical, or ground-wood, process was the single process most largely used, the three chemical processes, for the first time in Canada, together consumed more wood than the mechanical, the totals being: chemical processes 937,654 cords and mechanical process 827,253 cords. While a slight increase was made by the soda process and a considerable increase by the sulphite process, the notable change during the year was the increase made by the sulphite process from 470,949 cords in 1915 to 727,045 cords in 1916. An increased quantity of wood was converted into pulp by each of the four processes.

The exports of wood-pulp from Canada show alternate increases and decreases practically every year from 1909 to 1916. The total export in 1915 decreased 14.3 per cent., while in 1916 it showed the remarkable increase of 53.4 per cent. The exports to the United States show a gain of 148,263 tons. Exports to Great Britain increased from 18,488 tons to 51,072 tons, and to France from 18,335 tons to 31,831 tons. There was not much change in the business to other countries except that Spain, which was not an importer of Canadian pulp in 1915, took 1,737 tons in 1916.
