

# POTASH MEANS PROFIT

A Well-kept Orchard in the Famous Annapolis Valley!  
Owned by J. ELLIOTT SMITH, Wolfville, N.S.

For many years Mr. Smith has been fertilizing his orchard with Bone Meal and Muriate of Potash. The Nitrogen is supplied by growing and plowing in cover crops of clover

While in general farm practice, Potash is applied to the land in the Spring, numerous experiments have demonstrated its greater effects on the succeeding crop, when applied in the Fall. Especially is this true of Orchards.

Potash and Phosphatic Fertilizers do not leach from the soil, but, aided by moisture are gradually rendered available to the feeding roots of the plants.

If you neglect to fertilize your Orchard you cannot expect large returns.

Try an application of:

**200-lbs. Muriate of Potash and  
400-lbs. Acid Phosphate or finely  
ground Bone Meal**

These materials are stocked by all leading Fertilizer Dealers and Seeds-men.

Visit our stand at the Ontario Horticultural Exhibition, 14th to 18th November, in St. Lawrence Market, Toronto, or write us for free advice and copies of our publications, including:

"Fertilizing Orchard and Garden,"

"Artificial Fertilizers, Their Nature and Use."

"A Farmer's Field Tests," etc., etc.

**Dominion Agricultural Offices of the Potash Syndicate, 1102-1105 TEMPLE BUILDING  
TORONTO, ONTARIO**

Manager: B. LESLIE EMSLIE, P.A.S.I., F.C.S., C.D.A.

# VANCO LIME SULPHUR ARSENATE OF LEAD

The Norfolk Fruit Growers Association use VANCO Exclusively.  
See their Exhibit at the Horticultural Show, November 14th to 18th

**Then See Us and Ask WHY**

FERTILIZERS:

**NITRATE OF SODA  
MURIATE OF POTASH  
SULPHATE of POTASH  
ACID PHOSPHATE**

Everybody Looks  
to US for These

**CHEMICAL LABORATORIES**
