

Hay Fever

IN the opinion of many prominent rhinologists, laryngologists and general practitioners Solution Adrenalin Chloride and Adrenalin Inhalant meet the indications in Hay Fever better than any other agent.

SOLUTION ADRENALIN CHLORIDE

is a remarkably powerful astringent. In the treatment of Hay Fever it is usually diluted with four to five times its volume of physiologic salt solution. Sprayed into the nostrils by means of a hand atomizer, it promptly reduces the hyperemia and turgescence of the mucous membranes of the eyes, nose, etc., and checks the profuse secretions. It allays the nasal irritation and controls paroxysms of sneezing. Two or three applications a day ordinarily serve to keep the patient in a state of comparative comfort.

Supplied in ounce glass-stoppered vials.

ADRENALIN INHALANT

a more recent acquisition to our list of therapeutic agents has been used with marked success in the treatment of Hay Fever during the past two seasons. It contains one part of Adrenalin Chloride to 1000 parts of a neutral oil. The best results are obtained by spraying it into the nasal passages from an instrument adapted to heavy, oily solutions. Requiring no dilution, it offers an especially convenient method of application, and its oleaginous base imparts an emollient effect that is particularly gratifying to the patient.

Supplied in ounce glass-stoppered vials.
