Within the last few years rapid progress in bacteriology has involved many radical changes in the science, necessitating a thorough revision in the preparation of this edition. It is with pleasure we note the inclusion of all the recent advances in the subjects of immunity—tuberculosis, yellow fever, dysentery, bubonic plague, and other infectious diseases—making the work reflect as faithfully as possible the present status of bacteriology. We can confidently say that this book in the present fifth edition will be found of inestimable service to the student.
