31 Sat.	♍	23	05	7 35	8 51	18	09	22	07	Windy and m'ld.

PLANETS IN JANUARY.—Jupiter, Venus and Mercury are "Morning Stars" throughout the month. Saturn is an "Evening Star," rising at sunset. The Moon passes close by the place of Jupiter on the 4th, and, prior to her conjunction with the Sun, the waning Moon is near Venus on the 13th, in the morning before sunrise. Mercury is within 2° of Venus on the 24th, the little planet being favorably placed for seeing about that date, as he is then well out from the Sun, rising before the god of day, and reaching "greatest elongation West" on the 26th. The growing Moon will be near Saturn on the night of the 20th. Mars and Uranus are practically invisible.

NOTE.—"Moon's place" denotes the "Sign."—"Planet's places" the "Constellation."
