

Learn The Truth About The Cone And Disc Type of Cream Separators

THEN YOU WILL KNOW THE TYPE
THAT WILL BEST SUIT YOU

The intending purchaser of a Cream Separator is likely to be greatly puzzled in regard to the type of machine to select.

The makers of the cone type boost that type to the skies and knock the disc method.

The makers of the disc reverse the argument.

So how is a man or a woman to know which

one is the best when both are claimed to be IT?

How is a person to learn the truth?

Just this way, dear sir, or madam:

Ask the Maker of Both Types

That is the only way to get unprejudiced information—information that you can depend upon to be truthful and dependable.

We make both types of separators—the Frictionless Empire (cone method) and Empire Disc.

Our agents sell both methods.

So if you want the facts of the case go to them and hear what they have to say.

Learn why the Frictionless Empire just exactly meets some dairymen's requirements, while the Empire Disc is better for others.

Learn the difference in the way they are made.

Get our agent to take the cone and the disc machines apart so you can compare and study them.

After you've done so you'll know which method will be the best for you to buy.

But, remember, it is not so much the method—for both methods are good—but it's the choice of

The MAKE That Really Counts

Choose either the cone or the disc method, whichever your judgment tells you is best for you, but be sure your choice of the MAKE is right—

For a poorly constructed separator, no matter what method, is a mighty poor investment—an expensive and disgusting annoyance, to put it mildly.

There are plenty of these second-rate separators on the market, so be careful to purchase a machine with a reputation for Quality, such as the Empire Separators.

Frictionless Empire is The Original

Cone type separator. Like every other good thing it is widely imitated. But the imitations do not give nearly as much satisfaction.

Empire patents prevent the use of the Ball Neck Bearing and the Three Ball Bottom Bearing—so no other cone separator can be made to run so easily.

Other Empire patents prevent the use of such a simple driving mechanism—the Frictionless Empire is therefore less likely to get out of order.

It has no closed bearings on the spindle where every other separator company puts at least one and generally two—therefore less wear on Frictionless Empire. It will last longer.

It runs so easily it requires a brake to stop it.

No machine skims closer.

These points of superiority, with the lighter bowl, the more easily cleaned skimming devices, and the safety clutch, makes the Frictionless Empire the best cone separator in the world.

Empire Disc is the Champion Disc Machine

The Empire Disc is modelled on the lines of the disc separator that is acknowledged to be the champion of Europe—the home of the disc separator.

After we secured the rights to manufacture this machine in America, our expert designers were given the task of improving this separator, if possible.

They did so, with this result:

The bowl of the Empire Disc weighs twenty per cent. less than any other disc bowl of same capacity with central distribution feed.

It has the simplest driving mechanism.

The disc can actually be THOROUGHLY cleaned.

It has the Three Ball Bottom Bearing, same as the Frictionless Empire, therefore no other disc can run so easily. And certainly no other disc machine skims so closely as this improved champion.

Get the Free Dairy Book

It describes the both machines in detail. It gives many practical dairy pointers. It should be in the hands of every dairymen. It is sent free on request. And you can have an Empire Separator for FREE TRIAL if you so desire. Anyway, be sure and write for the dairy book to-day. Address our nearest office, or call on us at the Fall Fairs.
