cessity of taking care of the teeth in TERRIBLE SCARE FROM STRANGERS

childhood. The milk teeth prepare the foundation for the permanent teeth. If they decay too early before it is the proper time for the parmanent teeth to mature, there is no proper preparation of the slightest decay makes its appearance in a child's teeth, no matter how young it is, it should be taken to a dentist and a filling of the tooth. In this way, if the teeth are called the roots are entirely absorbed, and they can be literally taken out with the fingers it is seen to a case will be roots are entirely absorbed, and they can be literally taken out with the fingers in the tooth. In this way, if the teeth are can be literally taken out with the fingers in the tooth. In this way, if the teeth are called the roots are entirely absorbed, and they can be literally taken out with the fingers in the fingers in the contracted from this cause. It has been proved that diptheritic sore throats of the most dangerous kind have been traced to decaying teeth.

To keep the health sound it is essential to the decay of the food left around the teeth should not be contaminated with impurities. If the decay of the food left around the teeth is douldy so, and it is necessary to the period in the decay of the food left around the teeth is douldy so, and it is necessary to the period it was a combination of seuffling and sort was a combination of seuffling and service. The the decay of the food left around the teeth is douldy so, and it is necessary to the period it was a combination of seuffling and service. The most in the cellar showed five or six half grown pigs making a feast of the milk, which was streaming over the dould the contracted from the stream of the interior of the milk which half a teapoon-ful of tincture of myrrh mixed with half a teapoon-ful of tincture of myrrh mixed with half a teapoon-ful of tincture of myrrh mixed with half a teapoon-ful of tincture of myrrh mixed with half a teapon-ful of tincture of myrrh mixed with half a teapon-ful of tincture of myrrh mixed with half a teapon-ful of tincture of myrrh

nowadays in use, which are preferred by many people to the old-fashioned bristle brushes. A toothwash of half a teaspoonful of tincture of myrrh mixed with half a glass of water is an excellent thing for hardening the gums.

At least once a week the teeth should be brushed with pure white castile soap and water. This destroys effectually all animalculæ. If soap is used too often, however, it is said to turn the enamel yellow. If tartar is collected on the teeth in any considerable quantities it can only be removed with powdered pumice stone applied on a dampened linen cloth wrapped over a wooden toothpick. Use a very coarse piece of white silk dipped in pumice stone to clean between the teeth. An excellent tooth powder is made of equal parts of powdered pumice stone, powdered orris root and pulverized charcoal.—New York Tribune.

men believe that brushing a hat wears it out and quickly destroys the nap. This is a fallacy. The dust and dirt and grease are primarily responsible for hats quickly becoming shabby. Never put on your hat without brushing it with a soft brush (whisk brooms injure it), and when you lay it aside take care also that no dust remains upon it. Attend to these simple rules and your hats will last twice as long and look respectable even when they are nearly worn out.
