WILLIAM BRIGGS, 29-37 Richmond St. W., Toronto

The sectional cut shows why The Spramotor Hand Sprayer is so effective, simple and durable. It will last as long as required for painting, white-washing, orchard, potato, and mustard spraying. There are more Spramotors in use in Canada than all others combined. It has agitator, which thoroughly mixes the paint or chemicals before they are applied, which acts independently of the motor. It has brass independent ball valves, which remain tight in use. The plunger has stood ten years' test.

Free catalogue.

This shows another style of Spramotor, arranged for spraying potatoes four rows at a time, with three nozzles to a row, two from below, and one from above, for each row. Arranged for one or two horses. Will be found most economical, efficient and durable tool for this purpose. Can be also arranged for vineyard, orchard, or weed destruction, by a simple change of accessories. It has more genuine points of merit in it, and is capable of doing a greater range of work, than any other device of its character.

Full particulars on application.
