Combines the Best Qualities of Other Boilers

The Mumford Standard internally-fired boiler combines, to a remarkable extent, the best features of the Scotch and English types of internally-fired boilers, together with the lighter weight, less floor space, and more perfect circulation of the best boilers of the American water tube type.

The construction throughout, except the tube sheets, is cylindrical and spherical—requiring no stays. The boiler is supplied with an outer steel casting, or for brick setting, as desired by the customer.

The steam and water space is divided between two cylindrical shells. The thickness of plate is not so great as in the Scotch marine type, and the expensive and troublesome rear combustion chamber is avoided.
