### THE MIC-MAC REMEDY A SPECIFIC FOR SMALL-POX.

ANOTHER VICTORY FOR MAJOR LANE. A HOPELESS CASE OF SMALL-POX CURED BY THE MIC-MAC REMEDY.

GREENFIELD, Mass. To MAJOR JNO. LANE, To MAJOR JNO. LIANE,

DEAR SIR,—I telegraphed for a package of your Small-Pox Remedy on last. Monday, which I received the following day. I would have instantly responded and forwarded the money, but thought I would await the result of its trial. I prepared the medicine myself so as to render everything secure; medicine myself so as to reputer everything secure; and I am proud to be able to state that it produced almost instantaneous relief. It was a malignant case of Small-Pox—in fact, there was no hope of recovery expressed on any side; but by the application of your famous Remedy it easily yielded. Enclosed I send you a five dollar bill. Please acknowledge

Your truly, Rev. W. A. HENNEBERRY. Price \$5 per package.

Sent to any part of the Dominion, post paid on receipt of price-a liberal discount to Clergymen, Physicians and Charitable institutions.

B. E. McGALE. Dispensing Chemist, 301 St. Joseph Street.

# FARMERS' COLUMN.

Potatoes -An exchange says that when potatoes are boiled for pigs, they should be strained as the water is injurious to a less of greater degree, as it contains the poisonous alkaloid called solanime, which, it should be noted, is more abundant when the tubers begins to chimp or bud out. This is particularly applicable to what are termed "sunburnt" potatoes; but whether due to an increased proportion of solanine we are not prepared to state.

THRASHING.—When grain is thrashed, it is safe from the majority of its many enemies. It is also ready to sell at any moment's notice, when the price suits, or money is wanted. Perhaps no further reasons than these need be given why it is well to thrash as early as possible. One of the most convenient things about a farm is a thrashing machine and horse-power, or for larger farms one of the many good and cheap steam engines advertised. It is a great convenience to be able to thrash just when one wants to, and without the fuss and bother of a

Mowing.—Hay that is very nearly dry when put in a mow will keep perfectly, whether trodden down hard or left tight, provided there is no dew or moisture on the outside of it when drawn in. If trodden hard, there will be a little heat, while if left light, it would not be noticed. But if the hay is quite green when stowed away, it will heat less if trodden very hard than if but moderately pressed. The effect of hard treading is similar to that of sealing green fruits to keep them away from the oxygen of the air, without which no combustion can take place -- New England Farmer.

KEEPING POULTRY .- Our domestic animals, derived as they are from wild ancestors, roquire a certain amount of exercise to keep them in sound and vigorous health. Poultry cannot be kept in large numbers in confined areas without detriment to their constitution. Col. Taggart, of Pennsylvania, provides food and exercise for his fowls at the same time. In his pouliry yards are several beds about thirty feet square each, in which Col. Taggart buries oats, several bushel to the bed. The grains begin, of course, to germinate, and the fowls have free access, scratching and eating the tender sprouts to their heart's content. While the fowls are thus busy on one bed; a new one is prepared, which is in readiness for them by the time it is requir-

Ensuring Land —It is generally believed that no system of enriching land for small gardens, with a view to perfection of crops, is so truly economical and easily available as that of liquid manure. We occasionally hear of a gardener, or an amateur fruit grower, who has practised enriching the crop by use of liquid manure; but it is not a common practice so to enrich our gardens and lawns, however ofttimes the advocacy of the practice has been written. The writer practiced the sprinkling of a lawn in a dry season with weak liquid manure water and in the greatest of heat and drought has kept it fresh and green. In the management of pot plants, no course of supplying food equals that of a judicious use of liquid manure. There are in almost every family liquids, which usually go into a sewer or drains, or possibly upon the road, where they are of no avail; but if saved, being conducted to a tank, along with wash-waters of the house, would enrich an eentire garden for vegetables and fruits, flower-borders, etc, and the whole, if the wash be applied regularly, and at night, after sunset, in moderate quantities, would prevent the driest weather of midsummer from checking vegetation. If an unpleasant odor comes from the tank, a little plaster (gypsum) sprinkled in and around the tank would keep it sweet and clean. Again the use of liquid manure need never delay planting, because of manure not being on hand; but planting could proceed and the application of manure be made at leisure. - American Rural Home.

Build a Hennery.—We advise every man to build a hennery on the same principle that a farmer would build a barn-first, for comfort; second for convenience; and then add as much for elegance and style as he is willing to pay for. But such an expense should not be carried to the business account, to be settled out of the profits of the stock; but, rather, to the account of ornament, to be paid in the owner's satisfaction at fine appearances. The plan we would adopt for a poultry-house is this: Build on a southerly slope, if you can. Dig out for a back wall, to be cemented up. Then lay upon it a shed-roof, the roof and sides shingled, with tarred paper between the boards and shingles. It should be ten feet high in the front and five in the rear. On the juside have a walk three feet wide running the whole length, high enough from the ground to let the fowls under to scratch and go out into the yard. Lay a floor over the rest, with the roosts on the back part, with the shelves under them to catch the droppings, so arranged as to be removed and cleaned once a week The nests for large hens should be a foot high and small at the entrance, running back two feet. With such nests as these, heus seldom learn to eat eggs. Fasten the nests on the partition which separates the walk fom the coop. A building thirty feet long and fifteen feet wide may be separated into three rooms, large enough for twenty-five fowl to a room. Such a building can be put up for fifty dollars, and is worth as much for all prectical purposes as the most elegant building, while everybody that can afford to keep good fowls can afford such hennery.

How Horses are Made Balky .- An active, highspirited horse will start quickly and strike a trot at the first step. A timid driver is alarmed, fearing that the horse will run away he will jerk up the horse suddenly and violently. This irritates the horse, and he will not proceed. Then some annoyances are recommended to start him that would not have been required had he been used gently, and drawn up quietly, and spoken to in a mild voice. I once had a horse of this spirit, that I could start or stop in his best speed by the voice, and so low a tone that a person riding at my side would not notice that I had spoken. Again a horse of such disposition may be harnessed with a "slow poke." They cannot start together; this irritates the spirit ed horse, and will make him balk, as I have often seen in city cars. Let a man who is very active be compelled to walk for some time behind one who is very slow. He will find it a trial to his temper. A horse may be put to a heavy load with a tight collar, making the skin wrinkle and pinching him severely, or being greatly overloaded he is obliged to jerk violently to start his load, thereby bruising the flesh, and perhaps the next day, on being put to light work the unressonable" horse will balk merely because his shoulders have been bruised the day before., I once had a mare that would balk from such causes, but by being careful to avoid them, found her a most valuable animal, and never had any difficulty, with her. I have seen horses whipped shamefully in long teams before starting They would be flurried, no two pulling at the same time. It would require fifteen or twenty minutes to get them to their work.

By the advice of the most Competent Judges at the

OUR HOUSE obtained THE INTERNATIONAL MEDAL and the only GOLD MEDAL accorded for QUALITY, TASTE, CHEAPNESS, SUPERIOR FINISH, and GREAT VARIETY of FURS. This incontestible success obliges us to be always improving our assortment and we always go in person to
