

	PAGE
E. Diabetes mellitus	816
1. Introduction	816
(a) Conception of the Malady	816
(b) Diabetogenous Organs	816
2. The Metabolism in Diabetes mellitus	816
(a) Metabolism of the Carbohydrates in Diabetes mellitus	816
(b) The Protein Metabolism in Diabetes mellitus	819
(c) The Fat Metabolism in Diabetes mellitus	819
(d) The Mineral Metabolism in Diabetes mellitus	821
(e) The Total Metabolism in Diabetes mellitus	821
3. Ordinary Clinical Studies of Diabetes mellitus	822
(a) Etiology	822
(b) Symptoms of Diabetes mellitus	823
(c) The Course of the Disease	824
(d) Diagnosis of Diabetes mellitus	825
i. The Glycosuria	825
ii. The Determination of the Carbohydrate Tolerance	825
1. Tolerance After Gradual Withdrawal of Carbohydrate Foods	825
2. Tolerance After Sudden and Complete Withdrawal of All Foods (Starvation Method)	828
F. Gout	840
1. Introduction	840
(a) Conception of the Malady	840
(b) History	840
2. Clinical Study of Gout	841
(a) Etiology	841
(b) Clinical Forms of Gout	841
i. The Typical Acute Attack of Arthritic Gout (Arthritis urica acuta)	841
ii. The Polyarticular Form of Gout (Polyarthritis urica acuta seu subacuta)	843
iii. Renal Gout	844
iv. "Irregular" Forms of Gout	844
1. Chronic Gouty Arthritis (Arthritis urica chronica)	844
2. Abarticular Gout	845
(c) Investigations of the Metabolism of Purins in Gout	845
i. Introduction	845
