

Lister

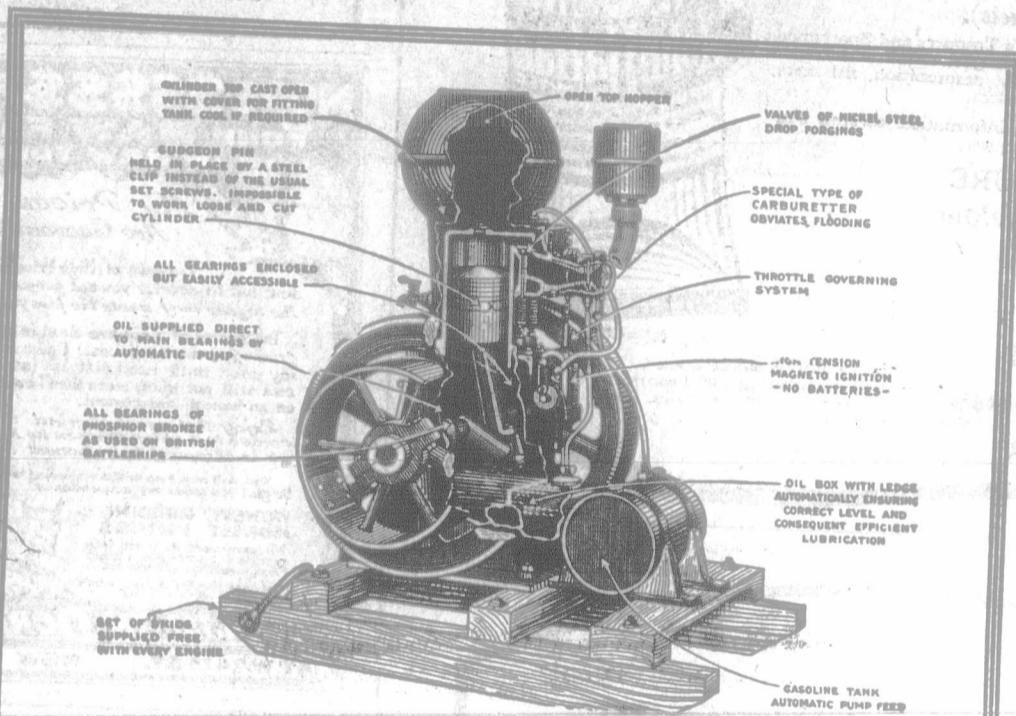

POWER ON THE FARM

There is no work on the farm,

for which power is required, which is not better, more easily and more economically handled by

"Lister" Farm Power Machinery

than by any other method

Where the call is for stationary power—power for operating the grinder, milking machine, lighting plant, saw or pump and handling numerous small "chores,"

"LISTER" ENGINES

furnish the power to do the work right—at small cost. 1½ to 14 H.-P. Kerosene or Gasoline types. British built.

Where there is a demand for sturdy power—power for plowing, hauling, heavy belt work or for any job where mobile power is needed, you'll find the

"AVERY" TRACTOR

in a class by itself for reliability, economy and efficiency.

The "Avery" is simple to handle, easy to operate and of low cost of upkeep. When working parts become worn, even the inner cylinder walls, you can easily renew them yourself and save the cost of the expert mechanic's time.
