**Remarkable
Invention
FOR THE
CULTURE
OF HAIR.**

THE EVANS VACUUM CAP is a practical invention constructed on scientific and hygienic principles, by the simple means of which a free and normal circulation is restored throughout the scalp. The minute blood vessels are gently stimulated to activity, thus allowing the food supply which can only be derived from the blood, to be carried to the hair roots, the effects of which are quickly seen in a healthy, vigorous growth of hair. There is no rubbing, and as no drugs or chemicals of whatsoever kind are employed, there is nothing to cause irritation. It is only necessary to wear the Cap three or four minutes daily.

60 DAYS' FREE TRIAL!
The Company's Guarantee.

An EVANS VACUUM CAP will be sent you for sixty days' free trial. If you do not see a gradual development of a new growth of hair, and are not convinced that the Cap will completely restore your hair, you are at liberty to return the Cap, with no expense whatever to yourself. It is requested, as an evidence of good faith, that the price of the Cap be deposited with the Chancery Lane Safe Deposit Company of London, the largest financial and business institution of the kind in the world, who will issue a receipt guaranteeing that the money will be returned in full, on demand, without questions or comment, at any time during the trial period.

The eminent Dr. I. N. LOVE, in his address to the Medical Board on the subject of Alopecia (loss of hair) stated that if a means could be devised to bring nutrition to the hair follicles (hair roots), without resorting to any irritating process, the problem of hair growth would be solved. Later on, when the EVANS VACUUM CAP was submitted to him, for inspection, he remarked that the Cap would fulfill and confirm in practice the observations he had previously made before the Medical Board.

Dr. W. MOORE, referring to the invention, says that the principle upon which the Evans Vacuum Cap is founded is absolutely correct and indisputable.

An illustrated and descriptive book of the Evans Vacuum Cap will be sent, post free, on application.

I Will Import for Showing and Breeding
SHROPSHIRE, OTSOWOLDS, HAMPSHIRE, OXFORDS, SOUTHDOWN,
or any other of the English breeds of Sheep, Cattle, or Horses, for those wishing to make an importation, large or small, this season. The best of care in selecting and delivering will be exercised, and the commission will be reasonable. Write me at once for what you want.
ROBERT MILLER, STUFFVILLE, ONTARIO.

AYRSHIRES AND YORKSHIRES

We offer several young calves of either sex, of choice dairy breeding, a few young cows and heifers in calf. We are importing several head of both sexes from Scotland. Our John Beeson has already selected 1st and 2nd winners of "The Derby," 1906, and 1st and 2nd in the Official Milk Record by Highland and Ayr Society, 1906. He is bringing out young stock of the same stamp and breeding, which will be for sale. Write us if you want something right at a reasonable price. Young bears fit for service. Young sows just bred. Feb. and April pigs for sale.
ALEX. HUME & CO., MENIE, ONT.
Long-distance 'phone (Campbellford).

Hillview Herd of Prizewinning
AYRSHIRE CATTLE.

All animals bred and carefully selected for size, constitution, long tests and deep-milking qualities. Select animals of both sexes for sale at reasonable prices. For further information and prices write

QUESTIONS AND ANSWERS.
Miscellaneous.

REGISTERING GRADED SHORT-HORNS.

1. Could Shorthorns we graded up be registered like Clydesdales are now?
2. Was that the cause of a number dropping out a few years ago?

Ans.—The English Shorthorn Herdbook (Coates') admits cattle having four crosses by registered Shorthorn sires, but very few now claim the privilege. The Canadian Herdbook formerly had the same rule, but it was repealed some years ago, and those entered under that rule and their progeny were dropped out. Animals to be eligible to registration now must trace in all lines to imported stock registered in the English Herdbook.
J. G.

OYSTER-SHELL BARK-LOUSE.

I have this spring sprayed on my apple trees 700 gallons of lime-sulphur wash to destroy the oyster-shell bark-louse. If there have been some limbs missed in the spraying, will it be safe to apply 10 lbs. of washing soda to 50 gallons water? Will it injure the foliage if I give them a good drenching?
F. A. F.

Ans.—The lime-sulphur wash is one of the best applications that can be made in the spring to eradicate the oyster-shell bark-louse. If the wash has been well applied, it should destroy most of the scales this season. Rather than risk applying the caustic soda, I think it would be better to spray only with the Bordeaux mixture and Paris green, as is used for the prevention of apple scab and various chewing insects upon the trees, and apply the lime-sulphur wash again next spring to clear the trees of whatever bark-lice may be left upon them.
H. L. HUTT.

POULTRY FATTENING.

Could you give me the name of any firm or firms that handle poultry for fattening?
A. P. H.

Ans.—The Flavells, London, Ont., and Lindsay, Ont., and, we believe, the Canadian Produce Co., Toronto, Ont., have done some fattening in that way in the fall. The manager of Flavells, London, does not regard the system as altogether satisfactory nor as economical as properly finishing the birds in the farm poultry-yard where they are raised. The extra cost of handling, delay in getting the birds started feeding well after the change in quarters, and the expensive plant unused for 8 or 10 months of the year, eat into the returns too seriously to make it a paying proposition. Before the last Ontario Winter Fair, Adam Armstrong, of Fergus, Ont., who has been in the chicken-fattening business for six years, told of losing \$100 in one season in that way, besides \$175 locked up in coops, which he afterwards turned over to farmers to do the fattening, which has proved to be the proper plan, as the Flavells point out.

SICKLY EVERGREENS.

Enclosed please find samples of branches from some spruce trees, planted out three years ago, now 4 to 5 feet high. They are blighted more particularly on the south side, some much worse than others. Will this rust on them affect them? Or is the burnt appearance owing to the spring sun and snow together acting on them? What can be done for them?
J. F.

Ans.—It is impossible to say definitely what may be the cause of injury to your spruce trees without seeing them, although, from the specimens sent, it is evident that some of them, at least, are affected with the spruce gall louse. The branch showing enlarged joints, shows the swellings produced by this louse, which is a very difficult insect to eradicate. Young trees badly affected might better be dug out and replaced with thrifty, healthy trees than attempt to nurse along the injured ones. The browning of the needles on the south side of the trees may be due to the effect of the sun shining upon the trees after a severe frost. I notice many of the evergreens this year in exposed locations are sunburned in this way. This is not a serious injury, and the trees will outgrow it.
