

# We've got a name to live up to.

For more than a generation now, farmers have looked to Versatile for dependable, innovative, hard-working farm equipment. We've never let you down. When you wanted more power to farm more acres more efficiently, Versatile was the first to mass produce high horsepower 4WD tractors. When you wanted to harvest more and spend less, Versatile introduced the biggest pull type combine available today. And now that the old ideas just aren't good enough any more, Versatile has come up with the bidirectional 200 Series. They're not just new tractors, they're a new kind of tractor.

Market conditions change, our competitors come and go, but Versatile's search for a better way never ends. We see our heavy investment in research and development as a commitment to the future of agriculture.

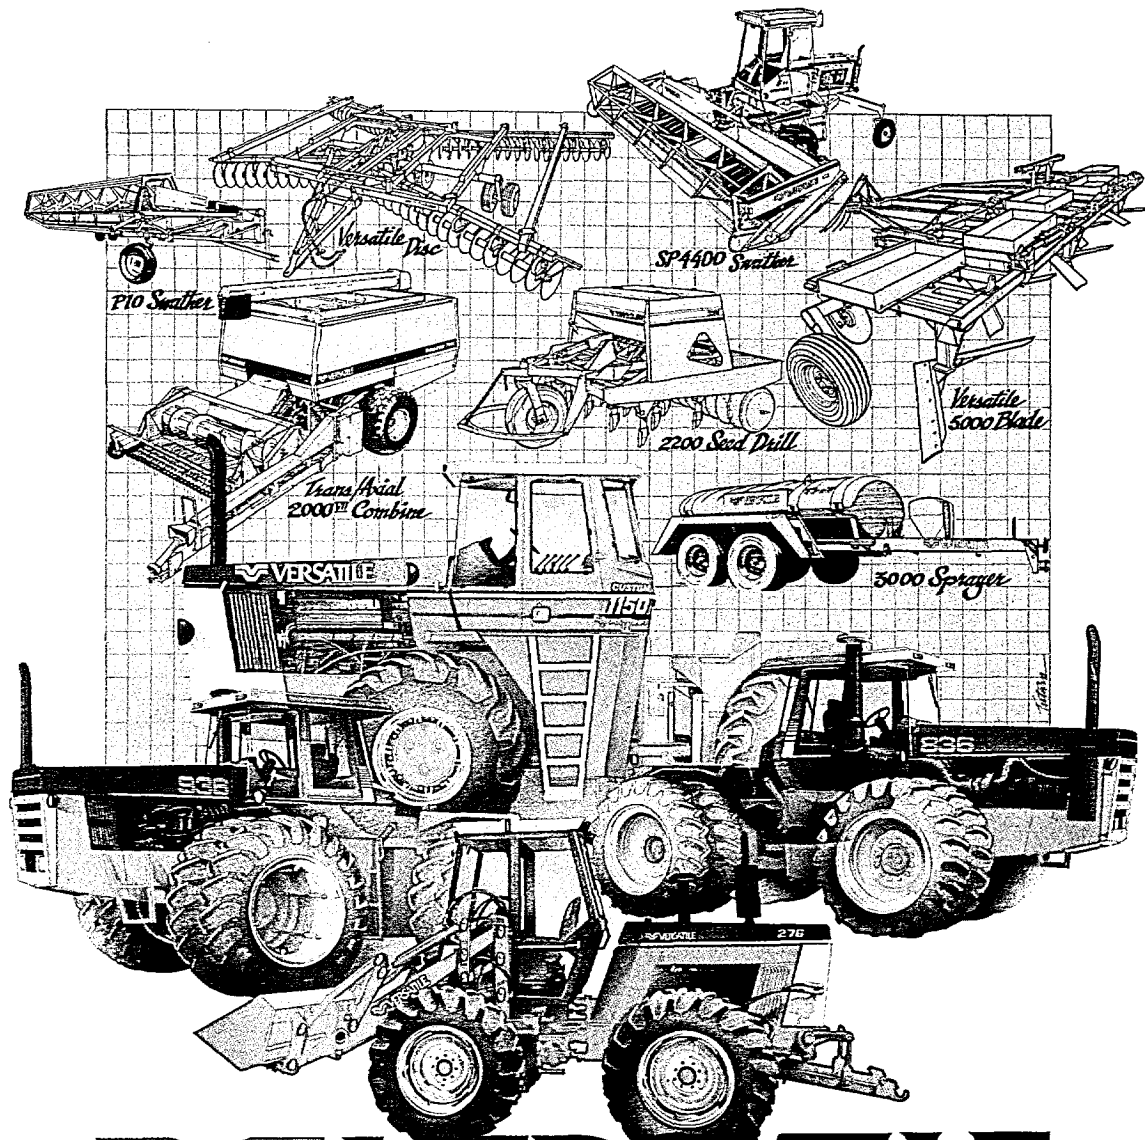

Versatile is the manufacturer of a full line of 4WD tractors, from 84 to 470 HP; SP and PT swathers; the world's largest PT combine; a variety of sprayers and discs; and time-proven minimum tillage blades and drills. At Versatile, we don't try to be everything to everyone. We only take on tasks we know we can handle well. We're specialists, and the equipment we build is specialized. Built to handle

particular applications, and handle them very well.

We've got the best products on the market, the best dealers, and the best financing through Versatile Credit Corporation. Why are we the best? Because we're supplying some of the most demanding farmers anywhere. As long as you're happy, we know we're doing the right things. Because nobody is tougher to please, than you!
