

December 19, 1924.

W.C. Leigh, Esq.,
Leigh Lecture Bureau,
152 West 76th St.,
New York City.

Dear Mr. Leigh:-

Professor Lloyd of this University has been doing some most remarkable work in Botany, some of which has been qualified by the New York Times as among the most important scientific work of the world.

While the study on which he has been lately engaged is of a very highly scientific nature, it can be readily understood and would, I think, make the basis of a most interesting lecture.

Professor Lloyd is a technician of very high skill and has been able to prepare a set of slides providing practically an X-Ray moving picture of plant processes. I am sending you herewith a brief note explaining of what the study consists. I would be very grateful if you would let me know whether you think this would prove an interesting subject, and whether you would put it on in New York.

Yours faithfully,

Wilfrid Bovey.
