 2.50

Patent-Collapsing Pocket Gimbal Compass

No. 199

For boating or yatching this compass will be found very useful, or, as an ordinary Pocket Compass, it has the great advantage of being steadier and more easily kept in a level position while using than an ordinary Compass.

No. 199.—Pocket Gimbal Compass, with Singer's patent dial, automatic stop and jewelled cap, complete in best morocco snap case, diameter 2 in. . . . \$6.00

Dipping Needles or Miner's Compasses

No. 200

No. 201

For Tracing Veins of Magnetic Iron Ore.

No. 200.—Miner's Compass or Dipping Needle, for tracing iron ore, glass on both sides, $3\frac{1}{2}$ inch., each \$10.00

No. 201.—Ditto, with Norwegian needle, glass on both sides, stop to needle, $3\frac{1}{2}$ in., each 14.00

When used for tracing ore the observer should hold the ring in his hand and keep the needle north and south standing with his face to the west. If held horizontal it serves, of course, as an ordinary pocket compass.
