work in sections readially especially if some of the sections contain drawn comb and that is one of the best inducements, another plan that has ottom been practiced by some is to place a little unsealed brood in one section the bees will follow and care for the inch brood and commence storing in the top of adjoining sections.

to be St. Thomas Ont.

R.H.S.

Help Medium Rather Than The Weakest Colonies.

When a colony has four or five frames of brood well filled, it is in rnt the condition for rapid development, rming while a colony with only two or three wing frames partly filled will remain at a tan to stand-still till hot weather comes. The beginner may think that his first Not so; let the little ones wait; a fame of hatching brood may be given to a colony with three frames well filled with brood, and it will not be long till that colony will be able to help others; whereas the same brood given to one of the weakest colonies would still leave that weaking a long time in becoming strong are should be to help the weakest. enough to help others.

In general, draw from colonies ms thaving five or more Laugstroth ctall frames of brood, leaving them with fund four, distributing this brood among he strongest colonies that have less han four frames of brood. When here are no longer any stronger ones to help, it will be time enough to help the very weakest.

American Bee Journal.

The time to clip a laying queen is he moment you find her. plan of keeping all queens clipped enables the operator to control warms and to identify his queens. merican Bee-Keeper.
