Timothy and Clover Hay.

The nutritive value of timothy hay is
the subject of some discussion at present,
it being unfavorably compared with that
of clover hay. On this point The
American Cultivator expresses the following
views. It is rather surprising that timo-
thy hay keeps its popularity so well as it
does. At its best its nutritive value is
much less than clover. But very little
timothy grass is cut early enough to be
at its best, because the majority of cus-
tomers prefer it after it has fully formed
its seed and has passed the flowering
stage. Timothy then has largely changed
the richer juices which the green timothy
possesses into a woody fibre that is little
better than so much straw. At its best
and cut before flowering, timothy con-
tains of its dry matter possibly 4 or 5 per
cent of albuminoids. But timothy grass
cut thus young dies down to less than
half the bulk it will make if cut two or
three weeks later. Consequently no
farmer is willing to cut it early.

Where timothy hay is fed without
grain, as it is on most farms, while horses
are not working, it is a very poor and un-
economical feed. We sometimes hear
complaints that horses grow poor and
show rough, staring coats while they
have timothy hay always in their racks or
mangers, though they have nothing to
do. These same horses will flesh up and
even fatten when set to work in the
spring, when some of the hay is cut and
fed, moistened with a mixture of corn
and oatmeal. This, we think, is a better
feed for horses that have timothy than is
cut hay and oatmeal. Timothy is very
deficient in fattening properties as well
as in the nutrition for giving strength.
When some clover is mixed with the
timothy, oats are a better grain to grind
to be mixed as cut feed than are corn
and oats. If the hay is all clover, horses
for farm work will do well on it without
any grain, though they will even then be
somewhat more efficient if given a small
amount of oats with the hay.

It is only the careless feeding of clover
hay which makes it unpopular with horse-
men. It is never disliked by horses and
cows. Indeed, the trouble is that horses
like it too well, and if given all they can
eat will gorge themselves so that in hard
work or fast driving the gorged stomach
will press against the lungs. There is al-
most always some dust with clover hay
because, being highly nitrogenous, the
clover heats too much and some of it is
burned, which makes it very dusty. This,
with horses whose wind has already been
injured by fast driving on an over-
loaded stomach, produces cough and the
diseases called "heaves."

Dairy Notes.

Watch the cow which gradually de-
clines in her yield while her mates, under
the same management, do not. Pedigree
counts for nothing when a cow will not
respond to good feed with a fair yield of
milk.

In butter making everything is being
sifted down to a business proposition.
Dairymen make more money now than
when butter was higher, because of
more scientific methods more creameries,
more summer crops raised and better
cows kept.

Failure will be certain to the dairymen
who have not the gift of punctuality, and
he had better quit. No experiment re-
quires more method. Every part of the
work must be performed every day and
almost every hour in the day. And vari-
ation is actual loss.

If all the buttermilk has not been
washed out of the butter, it is certain
that the attempt to work it out will result
in breaking the grain of the butter; and
if one does not understand the granular
system of churning it will pay him to look
into the matter at once.

He runs a dairy with most profit who
gives most attention to making the farm
produce large crops of grain and grass to be
fed to the cows; there is not so much
profit when the feed is bought outside.
The business of the dairyman does not
begin and end with the care of the cows,
but reaches into every detail of farm man-
agement.

It has been again and again demon-
strated that the less the butter is worked
the better. If the granular system of
churning is practised, and ample time
given for the water to drain out, no work-
ing will be needed, or only enough to
bring the butter to a solid condition. If
the buttermilk has all been washed out
there will be none left to work out.—
Rural Canadian.

Home Renovation.

Among the crosses many housewives
have to annoy them is a bathtub of un-
inviting appearance in a room that other-
wise looks fresh and clean after renova-
tion. The tarnished surface may refuse
to become bright, no matter what clean-
ing materials are employed. The Stand-
ard Designer tells how you may remedy
this and, by being your own workman,
save, at a trifling expense, make the bath-
tub quite desirable.

Procure a small can of common paint
of any light color desired, a can of enam-
el paint of the same color and a good
sized brush. Cut eight or ten inch pieces
of yellow soap into bits and put it over
the fire to dissolve in a couple of quarts
of water. Fill the bathtub with very hot
water and throw in a generous handful of

powdered borax and the dissolved soap.
When the water becomes cool enough to
put the hands in it, scrub the surface
with a brush, letting the water run off as
the work is done. Again partly fill the
tub with hot water and scrub it with the
brush and sand soap to make sure that
all greasy particles have been removed.
Then rinse it in clear hot water and thor-
oughly dry. Cover it with two coatings
of the common paint, letting one thor-
oughly dry before putting on the second
coat then give it several coats of the en-
amel paint. This paint will dry more
quickly than the other, and the bath will
no longer be an unsightly object. Care
must be used not to run very hot water
into the bath until the paint has harden-
ed.

Oilcloth, it is told by the same autho-
rity should be carefully swept to free it
from dust, then rubbed with a cloth dip-
ped in hot milk and afterwards rubbed
with a dry cloth. Occasionally a little
size dissolved in hot water, and the oil-
cloth rubbed with some of it will give it
a nice, bright polish. Beeswax and turpen-
tine will prolong its wear. This is
used in the way you would polish an oak
floor—that is rubbed on with a piece of
flannel and rubbed off and polished with
a dry duster. Washing oilcloth with soap
and soda and leaving the surface wet is
ruinous to it.

In washing furniture only small por-
tions should be done at a time, and each
part should be done thoroughly and quick-
ly dried. Work downward, beginning
at the top, so that splashes below can be
effaced as you work downward. The
following would be a good furniture
polish: One-half pint linseed oil, one
half pint turpentine, one half pint vine-
gar, one-half pint spirits of wine. Mix
well together. When used, shake well
and rub on the furniture with a piece of
linen rag and polish with a duster.

Humorous.

His First Case.

"I have never forgotten my first case,"
remarked one of Detroit's most successful
medical practitioners as he lit the end
of a choice cigar. "I was young and
hopeful in those days and duly impressed
with the importance of my mission life.
But there was a sad lack of patients upon
which to try my professional skill. How-
ever, I bolstered up my spirits with the
thought that my opportunity would come
sooner or later. My shingle swung in
the breeze for two months before it came.
"One cold, dark night, with a howling
blizzard raging, I received a hurly call to
attend an old party who lived some
12 miles from town. I knew him to be
rich and influential and congratulated
myself that my chance had come.
"Not owning a horse at that time, I
hired a lively rig and started as fast as I
could go.
"It was a wild night, and the snow was
drifted fence high, and it was not long
before I ran into the ditch and wrecked
the whole outfit.
"I woke up a farmer at the risk of my
life and hired another rig and at last
succeeded in reaching my destination.
"I found the old man holding his jaw
and swearing, and I was at once ordered
to get to work and yank the cussed thing
out.
"Then the awful truth burst upon me.
It was a dentist he wanted, and some one
had blundered. However I was there
and revenge was sweet.
"I tied a strong cord to the teeth and
secured the other end, to the doorknob.
Then I got on the other side and slam-
med the door shut and left without wait-
ing to see the result of my operation.
"I never sent in my bill."—Detroit
Free Press.

"Our landlady encourages us to talk
war at the table."
"What is her object?"
"It makes us more vigorous in our at-
tacks on the beefsteak."

"So that young man wants to marry
you?" said Mabel's father.
"Yes," was the reply.
"Do you know how much his salary
is?"
"No. But it's an awfully strange coin-
cidence."
"What do you mean?"
"Herbert asked me the very same
question about you."

A Wise Landlord.

One night a judge, a military officer,
and a priest, all applied for lodging at an
inn where there was but one spare bed,
and the landlord was called upon to de-
cide which had the best claim of the
three. "I have been fifteen years in the
garrison at B.," said the officer. "I have
sat as judge twenty years in R.," said
the judge. "With your leave, gentlemen, I
have stood in the ministry twenty five
years at N.," said the priest. "That set-
tles the dispute," said the landlord.
"You, Mr. Captain, have lain fifteen
years; you, Mr. Judge, have sat twenty
years; but the aged pastor has stood five-
and-twenty years, so he has the best
right to the bed."

Viewed from the Rear.

Professor (discussing organic and inor-
ganic kingdoms)—"Now if I should
shut my eyes—so—and drop my head
—so—and remain perfectly still, you
would say I was a clod. But I move, I
leap. Then what do you call me?"
Voice from Rear—"A clod hopper."

A PERFECT SNAP

We are now manufacturing a Ginger Nut, or Snap,
which all who have seen them call the most perfect
ever placed upon the market.

Our Fig Bars

are Faultless—equal to, or better than, any ever made or imported.
With every confidence of your approval, we offer those two lines for
your criticism.
