## MONEY MARKET.

on the following so, the business of the country not having increased in proportion to the increase of banking capital. A large amount of money is and has been for some time invested in New York on call loans against collaterals by several leading Canadian Banks. To them the operation has been very profit. able. They have lent their gold, in the first place, on the security of greenbacks at occasionally as high as to 1-16th per cent. per day, and then have had a second profit by lending the greenbacks to stock-brokers, on call at the current rate of 6 or 7 per cent. per annum. It is expected that gold will be more abundant in New York after the 1st of November, 23 large amounts will both be sold by the Treasury and paid out as interest on the public debt. Gold will then cease to be wanted, and we may suppose our banks will withdraw their coin as soon as it ceases to be profitable to hold it in New York, and thus throw much additional money into the market for investment. There has been some expansion of bank circulation during the past month, but as we said money is still very abundant, and the demand is not large in proportion. There is no present change in rates, however, for business paper, although large loans between banks have been done at from 4 to 5 per cent. per annum

Gold drafts on New York not much in demand, but may be quoted at par.

Gold in New York has been very weak, and declined to 136], closing, however, at 1372. The Repubican victories at the polls have helped to reduce the premium for the present, but we look for a reaction, and an advance to 140 or higher.

Silver is in rather better supply, with buyers at 0; to 31, and sellers 84 to 3 per cent. discount.
