

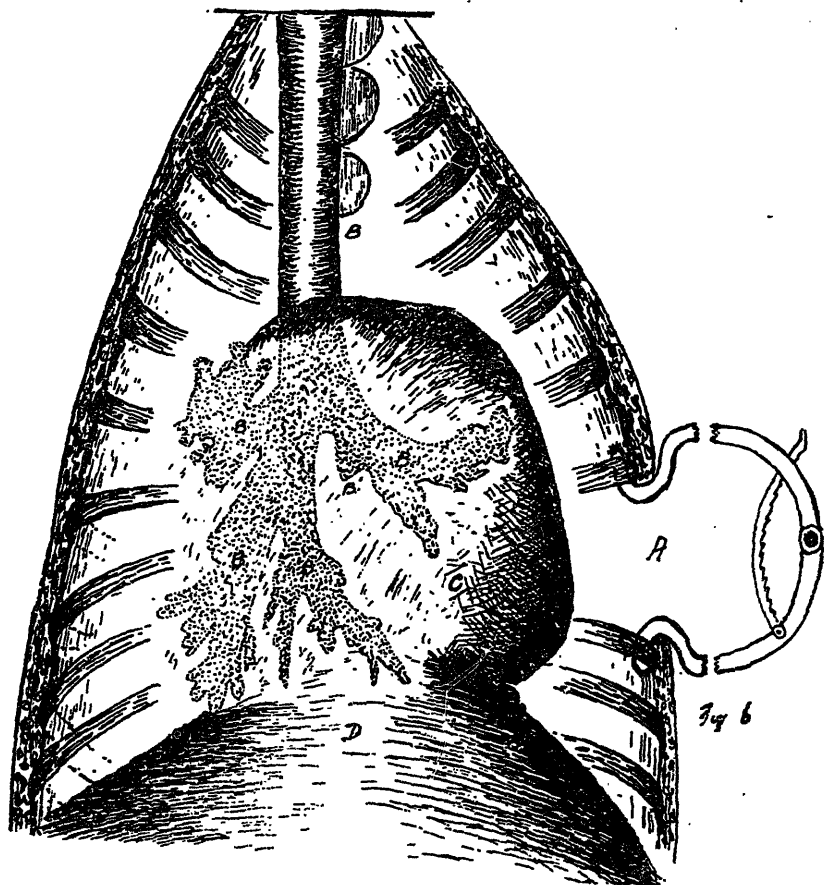

FIG. 6.—Drawing from skiagram of thorax and thoracic viscera of a dog, showing (a) Approach to mediastinum through linear incision and use of rib spreader instead of rib resection. (b) Trachea and bronchial tree injected with alloy, showing remarkable "tidal" capacity of the primary air passages in the dog; at B' is stump of bronchus to lower lobe, which has been excised. (c) Pericardium. (d) Dome of diaphragm.
