— The Petro

Market Overview
Trinidad and Tobago's petrochemical sector is experiencing rapid growth, offering a range of opportunities for Canadian companies. Fuelling this growth is the commissioning of several new plants, primarily for methanol and ammonia, and the construction of additional plants for iron reduction and iron carbides.

Approximately 10% of the world's methanol is produced in Trinidad and Tobago. New methanol plants have pushed production levels from 3.2 million tonnes per year in 1998 to 3.4 million tonnes per year in 1999. In August 1998, the country commissioned two new ammonia plants, which increased output from 2.2 million tonnes per year in 1998 to 3.6 million tonnes in 1999.
