REAL ESTATE

LARGE BUILDING LOTS FOR SALE AT
CARLETON PLACE

Prince Street Lancaster Heights
A modern water and sewerage system is being installed. Several lots have already been sold and a fine new house is under construction. There are no lots on the market as good value as these, if you take into consideration the site, view, accessibility, city convenience and desirability of location. Price of all lots until a few more are sold, \$650.

NEWLY FURNISHED ROOMS, heated, electric lights, 108 King street East. T. f.

LOST AND FOUND
A few days ago LA-COL. W. L. Watt, the O. C., threw open this institution to the treatment. Labels on doors such as "Eau Courante," "Fumigation," and "The no-penetration" were not very enlightening, but when the visitor saw a patient swing his arm round as though following individual exercise, and the patient asserted that a few months ago the arm hung helplessly at his side—then there was enlightenment.

The Granville Special Hospital saves wastage by dealing with the most desperate cases; in fact it is a sort of medical Salvation Army which saves or tries to save the submerged tenth in the war. Most of its patients are discharged and returned to Canada. The institution opened last November, and during the past three months 421 patients have been rendered fit for active service, while 112 have been sufficiently restored to remain in khaki for light duty.

In addition to the Granville block there is an annex in another part of the town known as Chatham House. Here there is a handicraft department, with fully equipped machine shop, blacksmith shop, carpenter shop, even a cigarette factory. Or if a man has the rural instinct he can breed rabbits and guinea pigs or delve in the garden.

CLASSES OF AIR CRAFT
Designated on Basis of Range and Speed—Seven Classifications
Pointing out that the rapid development of aircraft under the exigencies of war conditions has led to their classification in a manner not unlike that which has come to prevail in the fleets of the various nations at war, a military expert has outlined briefly the characteristics of the seven classes.

They are classified on the basis of their range. Therefore, in class 1 fall the machines which have the longest air endurance. It is roughly estimated that the craft in this class have a speed of 40 miles an hour for 40 hours. They are ships which are in a distinct class in which the aeroplane has no place. Class 2 includes the heaviest types of aeroplanes with a carrying capacity as great as small ships and possessing the advantage of independence of the wind. This class is as yet in the experimental stage. In class 3 is placed the swift aeroplane with an air endurance of 10 hours and a maximum speed of 95 miles an hour. It is especially valuable for night scouting and, since it can reach an elevation of 15,000 feet, it can take advantage of the shelter afforded by clouds to observe enemy positions.

Class 4 is made up of machines of the same general qualities as class 3, but air endurance is sacrificed to carrying power, and the machines are used in flares for bomb dropping on enemy positions. Class 5 consists of machines much lighter in weight, of shorter air endurance, and capable of great speed in the pursuit of airships. Class 6 is the name given to the small armed aeroplanes equipped with wireless, which rise in full view of the enemy and report the range to the artillery officers. It is easily controlled and dependable. And the class 7 machine is even smaller, with the gun stationary so the machine

DOES MARVELOUS WORK FOR THE WOUNDED; Methods of Treatment
London, July 4.—(Correspondence)—Standing upon the cliff at Ramsgate, not far from the mouth of the Thames, is a fine spacious building which a short time ago was a flourishing hotel, and which the Canadian Special Hospital is now using as a hospital for the treatment of the injured. Surgeons have done their part, but the patient who comes to the hospital is in a state of collapse. The loss of power may be owing to direct injury to a local part, or from shock. In the Granville Hospital they have some weird apparatus and methods which have been used in the treatment of the injured. The patient who comes to the hospital is in a state of collapse.
