In the cure of severe coughs, weak district softing of blood, and the early stages of a manufacture. Dr. Pierce's "Golden Medical Ducovery." has a stopished the medical feeths. While the medical faculty. While it cures the keyerest coughs, it strengthens the system and purifies the Ward. By druggists.

Scientific and Azeful.

DAMP CLOSETS,-For a damp closet or DAMP CLOSETS.—For a damp closet or cupboard, which is liable to cause mildew, place in it a saucer full of quicklime, and it will not only absorb all apparent dampness, but sweeten and disinfect the place. Renew the lime once a fortnight, or as often as it becomes slacked.

To Kuny seeds from the depredations of mice, mix in some pieces of camphor-gur Camphor placed in drawers or boxeo w warn away mice, as well as moths.—Spots on varnished furniture are readily removed by rubbing with spirits of camphor or essence pepper-mint, and afterward with oil or furniture polish.

AN EXCELLENT Sour .- An excellent soup can be made by taking one can of corn and boiling the corn in one quart of milk and water in equal proportion; season with salt, pepper, and butter. After it has boiled for about ten minutes stir in it three well-beaten eggs. Serve hot, with a little rolled cracker, added in the feet of the continue to the stirt before the continue to the stirt before the continue to the stirt before the continue to the stirtle stirtle stirtle the stirtle stirtl eggs. Serve hot, with a nate to had added just before sending to the table.

THERE KINDS OF CAKE FROM ONE RE-CIPE.—The housekeeper who is limited as to time and materials will find the following recipe a most excellent one: One pound of to time and materials will find the following recipé a most excellent one: One pound of flour, one pound of sugar, three-quarters pound of butter, ten eggs. Mix as for pound cake. Divide into three parts: cake one; third flavour with lemon, or to taste, and bake as pound cake. Mix one cupful of raisins, one cupful currants, piece citron, cut thin suices to taste, with record one; third and thin, spices to taste, with second one-third, and bake as fruit cake. To the remainder add flour enough to roll and cut-

flour enough to roll and cut.

CRULLERS,—Happy is the woman who can have for use in cooking genuine, freshly-made buttermilk. The following recipe for crullers ign proof of this: Half a pint of buttermilk, a small teacupful of butter, two cups of sugar and three eggs. Beat the eggs and then add the milk and sugar. Half a teaspoomful of soda, dissolved in a little hot watenshould then be added. Grate half a nutmen and stir in with a teaspoomful of salt and half a teaspoonful of ground cinnamon of good strength. Work in flour enough to make a firm, smooth dough. Roll this and cut out cakes in fancy shapes, or twist like ordinary fried cakes. Fry in hot lard.

LADY FINGERS.—Lady fingers made after

crdinary iried cakes. Fry in not tard.

LADY FINGERS.—Lady fingers made after this recipe are very nice for tea; they should be eaten while fresh: Rub half a pound of butter into a pound of flour; to this add half a pound of sugar, the juice and grated rind of one large lemon, and, lastly, three eggs, the white and yolks beaten separately and the whites stirred in after all the other annualizate are well mixed together. This ingredients are well mixed together. This dough, is properly made, will be stiff enough to make rolls about the size of a lady's finger; it will spread when in the oven, so that it will be of the right size and shape. If you wish them to be specially inviting, dip them in chocolate icing after they are baked. Take pains so see that the icing is so hard that it will not run, and set the cakes on a platter in a cold room until the icing is firm.

LEMON CUSTARD.-Custard is simply milk thickened with eggs. When a femon custard is required rub lumps of sugar over the rind of lemons to get the "zest." This is a more delicate way than using the juice of the femon, which is apt to curdle the cusof the remon, which is apt to cardie the custard. From the lemon rind you get the oil, which makes a better combination. Take half a pint of milk, boil it in a small saucepan, and pour it into a jug. Fut a large saucepan on the fire half full of boiling water. Break two eggs into a bowl and beat up yolks and whites together, adding the hot milk (which has been sweetened) a teaspoontul at a time, and beating so thoroughly that all the glarr of the egg is broken up. When all the milk is added set the bowl in the sauceand the misk is added set the bown in the sauce-pan of poiling water and stir until the custard thickens. Pour into cups and set aside to cool. English cooks stir the custard until it is nearly cold. Very delicate custard can be is nearly cold. Very deficate custand can be made with rice flour or com starch, the re-cipe for which comes with the package.

(The Teason why the surgeons of the International Throat and Lung Institute, 173 ternational Throat and Lung Institute, 173 Church street, Toronto, are making so many wonderful cures of catorit, catarihal dealness, bronchitis, and and onsumption are: They have used by stilled and qulified medical men control with the Institute. They adhers an explicitly to their specialty and they use the prismeter invented by M. Souvielle, exactle surgeon of the French army, an instrument which conveys the medicines in the form of cold inhalations to the pairs diseased, which is the only way these diseases can be cured. They are treating hundreds of patients every month, having twelve surgeons engaged in their work in Canada alone. Send a three-cent stamp for a copy of their International News, published monthly at 173 Church street, Toronto.

A GREAT REVELATION.

Synopolefet a Lècturo Delivered by Dr. Belwyn Sinnley Before the Metro-politum Scientific Associa-tion of London.

"The free and independent thought of this age accepts statements only where they are preven to be truth, while the developments of meptal power seem equally great in every other depairment of itle. The valuable inventions of the truth counte by thousands. The increase of scishific study is universal. The spirit of inquiry in all fields is so to the sate occurse comment on every alle while people so to cause comment on every alle while people so the can help them merally, mental to the professional content in, and the truth which the temple have found, even in the last fitty year, a simply maryellous. How really ignorant some intured and supposeably scientific people were only a few years ago, as compared with the present day, may be better underwood from a few

ILLUSTRATED PACTA.

Silustratro facts.

"A prominent American writer prepared an elaborate essay to prove that steamships could never cross the Atlantic, and his pamphlet was issued just in time to be carried by the first steamer that come to England. People once believed the the heart was the seat of life and health. It is now known that this organ is only a pump, simply ke plug in motion what other and more important orns of the body have created and transformed. It was one supposed that if a person left a pain in the base his liver was deranged. It apain came to the pure chest the lungs were affected and consumpting was near; it is now known that a pain in the bottendicas sidesead kidneys, while troubles in the lower chest arise from a disordered liver and not imperfect lung. A severe pain in the highead was once thought to from from some partial derangement of the brain of it is now known that troubles in other parts of the body and away from the hearl, cause headaches, and that only by removing the cause can the pain be cured. It is a matter of

PRIVATE HISTORY
that General Washington was bled to death. His last tliness was alight, and caused principally by weariness. A physician was called who 'bled him copiously.' Strange to say, the patient became in better! Another doctor was called, who again took away a large amount of the vital fluid. Thus in succession four physicians drew away the life of a great man who was intraded by nature for an old age, and who prematurely died murdered by malpractice bled to death. That was the age of medical bleeding! P"

The speaker then graphically described

who prematurely died murdered by malprastice lied to death. That was the age of medical bleeding! I"

The speaker then graphically described another period which came upon the people, in which they assigned that origin of all diseases to the stomach, and after storging the falsity of this theory, and that the kidneys and liver were the causes of disease, and that many people are suffering from kidney and liver troubles to-day who do not know it, but who should know it and attend to them at once, continued:

"Let us look at this matter a little more closely. The human body is the most perfect and yet she most delicate of all created things. It is capable of the greatest results and it is liable to the greatest disorders. The slightest causes sometimes seem to throw its delicate machinery out of order while the most simple and common-sense care restores and keeps them in perfect condition. When it is remeashered that the amount of happiness or misery we asbered that the amount of happiness or misery we asbered that the amount of happiness or misery we are to happ to this world is dependent upon a perfect body, is it not strange that simple precautions and care are not exercised? This is one of the most vital questions of life, People may avoid it for the present, but there is certain to come a cime in every one's experience when it must be faced.

"And here pardon me for relating a little personal experience. In the year 1879, I found myself losing both, in strength and health. I was unaccountably irred, my appetite was fickle, my head troubled me at timbs and occasionally pains would shoot through different partions of my body. I could assign no cause for this decline, but it continued, until finally I called to my aid two prominent physicians. After trypting me for some time shey declared I was suffering from Bright's disease of the kidneys, and that they could do nothing more for me. At this time I was on weak I could not raise my head from the pillow and I

The pillow and I

PAINTED REPEATEDLY.

My hear best so rapidly it was with difficulty I could sleep. My lungs were also hadly involved. I could retain nothing upon my stomach, while the most intense pains in my back and bowels caused me to long for death as a relief. It was at this critical juncture that a physical longing which I felt (and which I most firmly believe was an inspiration) caused me to send for the leaves of a plant I had once-known in medical practice. After great difficulty I at last secured them and began their use in the form of fea. I noticed a lessening of the pain at once; I began to mead rapidly; in five weeks I was able to be about, and in two months I became perfectly well and have so continued to this day. It was only natural that such a result should have caused me to investigate most thoroughly. I carefully examined fields in medicine never before explored. I sought the cause of physical order and disorder, happiness and pain, and I found the kidneys and liver to be the governors, whose motions regulate the entire system.

After describing at length the offices of the kidneys and liver, and their important part in life, the Doctor went on to say.

over to be the governors, whose motions regulate the entire system."

After describing at length this offices of the kidneys and liver, and their important part in life, the Doctor went on to say.

"Having found this great truth, I saw clearly the cause of hywecovery. The simple vegetable leaf I had used wasta food and restorer to my well nigh exhausted kidneys and liver. It had come to them when their life was nearly gone and by its simple, yet powerful influence, had purified, strengthened and restored them and saved me from death. Realizing the great benefit which a knowledge of this truth would give to the world I. I gan in a modest way to treat those afflicted and in every case I found the same.

MAPPY RESULTS

which I had experienced. Not only this, but many who were not conclous of any physical trouble, but who' at my suggestion, began the use of the remedy which had saved my life, found their health steadily largroving and strength continually increasing. So universal, where used, was this true, that I determined the entire world should share in its remits, and I therefore placed the formula for its preparation is the hands of Mr. If H. Warner, a gentleman whom it cured of a severe kinder disease, and who, by reason of his personal worth, high standing, and liberality, his become known and popular to the entire world. This gentleman at once began the manufacture of the remedy on a most extensive scale, and to-day Warner's Safe Cure, the

pure remedy that saved my life, is known and used in all parts of the world and can be found on the shelves of every store.

"I am aware a prejudice exists toward propue

na nu parts or the world and can be found on the shelves of every store.

"I am sware a prejudice exists toward proprie tary medicines, and that such prejudice is too often well completh but the value of a few remedy in the latest proprietary medicine. A justif ble prejudice exists toward quark doctors in its pright that this prejudice should extensite the proprietary trips to do their duty! Because Warner's and the store an experience of the waved my life before it because a propriety medicine, is it reasonable to suppose that will not cure others and keep still more to be a supposed to the propriety medicine, is it reasonable to suppose that will not cure others and keep still more to be a supposed to the propriety of the supposed to the propriety medicine, is it reasonable to suppose that will not cure others and keep still more than on the wrapper? Such a theory would be childsh."

The doctor then reals some high searching.

The doctor then paid some high compliments of the science, and closed his secture as file

motern science, and closed his secture as follows:

"How to restore the health when broken and how to keep the body perfect and free from disease mint ever to man's highest, study. That one of the greatest revelations of the present day has been made in accurating the true seat of health to be in the kidneys and liver all scientists now admit, and I can but feel that the discovery which I have been permitted to make, and which I have described to you, is destined to prove the greatest, best, and most reliable friend to those who suffer and long for happiness, as well as to those who desire to keep the joys they now possess."
