**"BAKER" WINDMILLS**

"BAKER" Back Geared Engines are so constructed that the gears cannot wear out of mesh, must necessarily work in mesh, as our wheels are built on a hub which revolves on a long independent steel spindle. The wheel cannot sag or become out of line. The hub revolving on the cold rolled steel spindle maintains the gears absolutely in position. In the construction of the "BAKER" back geared mills the small gear or pinion on the hub is below the large gear carrying the pitman. This position of the gears further prevents same from wearing out of mesh, and gives them the fullest wearing surface, and greatly increases the life of the machine.
