

How to Make Better Cough Syrup than You Can Buy

A Family Supply, Saving \$2
and Fully Guaranteed.

Sixteen ounces of cough syrup—as much as you could buy for \$2.50—can easily be made at home. You will find nothing that takes hold of an obstinate cough more quickly, usually ending it inside of 24 hours. Excellent, too, for croup, whooping cough, sore lungs, asthma, hoarseness and other throat troubles.

Mix two cups of granulated sugar with one cup of warm water, and stir for two minutes. Put 2½ ounces of Pinex (fifty cents' worth) in a 16-ounce bottle, then add the Sugar Syrup. It keeps perfectly. Take a teaspoonful every one, two or three hours.

This is just laxative enough to help cure a cough. Also stimulates the appetite, which is usually upset by a cough. The taste is pleasant.

The effect of pine and sugar syrup on the inflamed membranes is well known. Pinex is the most valuable concentrated compound of Norway white pine extract, rich in gualacol and all the natural healing pine elements. Other preparations will not work in this formula.

The Pinex and Sugar Syrup recipe is now used by thousands of housewives throughout the United States and Canada. The plan has been imitated, but the old successful formula has never been equalled.

A guaranty of absolute satisfaction or money promptly refunded, goes with this recipe. Your druggist has Pinex, or will get it for you. If not, send to The Pinex Co., Toronto, Ont.

NO MORE WET OR COLD FEET!!

With Health Brand Clogs on, the man or woman who works in the wettest, coldest places always has warm, dry and comfortable feet. Try a pair yourself this winter.

Felt-lined CLOGS

QUESTIONS AND ANSWERS. Miscellaneous.

DISHONORING A NOTE.

A gives B a note for a sum of money on which nothing has been paid.

1. If A signs his property over to C, can B collect the note, or can he put A to any cost?

2. Can B go to law over the note? Ontario. A SUBSCRIBER.

Ans.—1. Most likely he can.

2. Yes.

DILATORY TINSMITH.

Is it possible to collect damages from tinsmiths who have been promising to put eavestroughs on barn for over a year, and have set time at different days to come, and failed to do it, and as it has done damage to my stock and barn, I would like to know if they could be made to pay damages? N. S.

Ontario.

Ans.—It is very doubtful, indeed, whether you could recover damages in an action such as is suggested. It does not appear from your statement that the agreement between the parties is sufficient for the purpose. However, the thing is possible, and it might be profitable to consult a solicitor about the matter, personally.

ALLOWANCE FOR PLOWING.

I rented a farm last fall, but do not take possession until the spring. As soon as I settled with the owner, I went out and told the man who was renting the farm to stop plowing, as I had decided to take the place. He had five acres plowed, for which he wants to charge me \$2.50 per acre. Is it right that I should pay him for it? Ontario.

Ans.—We think so—as a matter of equity if not of law. In legal strictness, it depends mainly upon the terms of the man's tenancy. If the term was uncertain—for instance, liable to be ended at any time by notice from the landlord, then the tenant would undoubtedly be entitled to be compensated for plowing done by him prior to his receipt of such notice; and this is probably this man's case.

FERTILIZERS FOR POTATOES.

1. I would like to know where to buy the complete fertilizer you prefer for potatoes. Would I have to buy each separate, and mix at home?

2. What would they cost per hundred?

3. When the potatoes are planted with the planting machine, would it require as much fertilizer? I understand it all goes right in the row with the potatoes. R. J. McR.

Ans.—1. The separate materials, sulphate of potash, acid phosphate, and nitrate of soda, for home-mixing, could be obtained from companies advertising in these columns, or from their agents.

2. The cost of these materials would be, approximately, as follows:
Sulphate of potash, \$2.60 per 100 lbs.
Acid phosphate, 90c. per 100 lbs.
Nitrate of soda, \$2.75 per 100 lbs.

The prices would vary, of course, according to the quantity purchased.

3. We are inclined to advocate broadcasting the fertilizers instead of putting them in the row with the potatoes, especially when one remembers that not only the potato crop, but succeeding crops, have to be considered in applying the fertilizers. Probably only one-half of the potash and phosphate will be taken up by the potato crop, the remainder being utilized by the following crops. Broadcasting encourages a wider root development, which means a greater feeding area, and less liability to injury from drouth. If possible, broadcast the potash and phosphate on the land early in spring, and apply the nitrate of soda at the time of planting. All fertilizers require a certain amount of moisture to dissolve them, and to render them available to the plant, and, doubtless, the failure of many farmers to get results in the first season is due to the fact that they apply them too late. Very often in Ontario a dry spell sets in just after the hard crops have been seeded, and it is obvious that if fertilizers are withheld until then, the best results could not be obtained from their use in such a season. We would recommend that, if possible, a medium application of about 8 to 10 tons of barnyard manure per acre be applied also. B. L. E.
