

"OTHELLO"

The last word in stove building.
The Wonder Worker

Large
Oven

"Treasure"
Stoves and Ranges

You do not take any risk in buying one of these stoves. They are backed up by 75 years of stove building. Absolutely guaranteed.

Made from the very best pig iron (no scrap used). Heavy nickle plate (detachable).

For sale in every locality.
Ask your dealer for them.

The D. Moore Company
LIMITED
HAMILTON, ONTARIO

"ART TREASURE"

Double Heater Base Burner with oven.
Will bake as good as a range.

**Some Signs of Gentlefolk.**

Thomas Wentworth Higginson said: "Shut me up in a dark room with a mixed multitude, and I can pick out the gentlefolks by their voices."

In the compass of every voice there are three registers—the middle, or throat; the lower, or chest; and the upper, or head, register. The use of the middle pitch for talking is very desirable, but the voice should be trained to slide up and down, varying with emotions, low when the mood inclines toward seriousness and higher when it becomes tinged with excitement. An interesting speaker constantly changes his pitch, but with ease and skill, and the greater range one has the more certain he is to get and retain the pleased attention of listeners. Our high-pitched strident voices are sharply criticized, and it is quite within our power to change them.

When we see a girl who laughs and talks loudly in public places we put a severe strain upon our charity and judgment not to think her vulgar.

What can be more cruel to a sensitive soul than to be conscious that you are wondering "how it happened"?

A noted cripple once said that he always gauged his friends by the degrees in which they reminded him of his deformity. A well-bred lady or gentleman will never apparently notice any defect or deformity in another, or remind him even indirectly of his misfortune; but they will try to make him forget it. Never to notice or speak of that which can possibly give pain or embarrassment to another is the test of good breeding. We often see people in the cars and on the streets stare at the deformities, physical defects and deficiencies of unfortunates in a manner which almost brings tears to our eyes.

Horace Mann says: "If there is a boy in school who has a clubfoot don't let him know you ever saw it. If there is a boy with ragged clothes, don't talk about clothes within his hearing. If there is a hungry one, give him part of your dinner. If there is a dull one, help him to get his lessons."—Our Young Folks.

FORCE OF HABIT.

"Something I can do for you, sir?" said the floor-walker to a man anxiously walking up and down every aisle in the big store.

"Well, yes," answered the man. "I seem to have lost my wife."

"Third floor, third aisle," said the floor-walker. "You'll find a full line of mourning goods there."

Says Pat—"Did you have anny luck at all in the Derby this year?"

Says Mike—"I b'lieve I did, though I don't know for right yet. I backed a horse at twenty to one, but faith he never came in till a quarter av six."

**THE POPULAR
London
Engine**

Can be operated with satisfaction with no experience.

London Engines are shipped complete ready to run.

Quality at a low price.

Do more work for the same amount of fuel.

Guaranteed against freezing in vertical type. Sizes: 1½, 2½, 3½ and 4½ H.-P. Other sizes: 8 and 12 H.-P. horizontal.

London Gas Power Co., Limited

London, Canada

THE PREMIER CREAM SEPARATOR

The Product of Experiment and Experience

In the manufacture of the Premier Separator special attention has been given to the following features:

- (1) Efficiency in skimming,
- (2) Quality of material,
- (3) Simplicity of construction,

with the result that the Premier is the most efficient and durable separator in the market to-day and is the easiest to operate.

A glance at our collection of testimonials will prove the all-round satisfaction which this machine is giving; a post card will bring you same. Write at once.

The Premier Cream Separator Company
St. John Toronto Winnipeg

He had been a bachelor for many years, but finally married. After several years, his wife said one evening:

"You do not speak as affectionately to me as you used to, dear. I fear you have ceased to love me."

"Ceased to love you!" growled the husband. "There you go again. Ceased

to love you! why, I love you more than life itself! Now, will you shut up and let me read the paper?"

"What made the canoe tip over?"

"Cholly carelessly placed his pipe in one side of his mouth."

Seven Modern Wonders.

Taking the consensus of opinion among noted scientists of Europe and America, Popular Mechanics has compiled a list of the seven modern wonders of the world. When Antipater wrote his guide-book of antiquity two centuries before Christ, he fixed upon seven wonders which have come down in history to the present time, as follows:

The Pyramids of Egypt; the Pharos of Alexandria; the Hanging Gardens of Babylon; the Temple of Diana at Ephesus; the Statue of Jupiter by Phidias; the mausoleum erected by Artemisia, at Halicarnassus, and the Colossus of Rhodes. One thousand letters were sent out enclosing a list of fifty-six subjects of mechanical and scientific achievements. The letters requested the learned men to mark the seven which, in their opinion, were the greatest wonders of modern times. The ballots on the highest seven items stood this way: Wireless telegraphy, 244 votes; telephone, 185; aeroplane, 167; radium, 165; antiseptics and antitoxins, 140; spectrum analysis, 126; X-ray, 111. The three next highest achievements received this vote: Panama Canal 100; anesthesia, 94; synthetic chemistry, 81. Maxim, Marconi, Alexander Graham Bell, Mme. Curie, Edison, Steinmetz, Albert Zahm, R. W. Wood, David Todd, D. E. E. Hyde, members of the French Academy of Scientists, of the Royal Society of London, the American Academy, and the Great German Universities, are represented.

Persistence that Won.

The Scientific American relates the following story of a determined blacksmith who won success by determined and intelligent effort:

"I am a blacksmith from Canada," he said. "I hammered this out on the anvil. It is going to be used instead of ordinary leather collars." It weighed forty pounds.

"How is a horse to carry this load around his neck and draw a heavy load as well?" he was asked.

"This is a little heavier than it need be," he explained. "It will be all right."

An effort was made to dissuade him from wasting money on a horse-collar that weighed forty pounds, but he was sure of his ground. Six months later the Canadian returned with another collar, an improvement on the original, and which weighed but fifteen pounds. Three times the man came back. Each time he brought with him a new metal collar, lighter and better than its predecessor.

Now, almost every fire-engine horse and omnibus horse in this country and in Europe wears what is known as the stamped-up metal collar. From forty pounds, the Canadian had reduced its weight to almost as many ounces. He has given up blacksmithing and lives in luxury in London.
