Charges reasonable, especially to the poor. CURES GUAR-ANTEED.

VARIOCELE and FILES, and KNOT-TED VEINS of the Leg cured at once without operation. Doctors will deng-this. But we are proving our claims every day. The method is simple, the cure is certain and permanent.

\$1,000 for Faiture. DUPTURE AND FISTULA CURED. The SIGNS of SYPHILIS are blood

The SIGNS of SYPHILIS are blood and skin diseases, painful swellings, bone pains, mucous patches in the mouth, hair loose, pimples on the back and wartby growths. We cure these for life without injurious drugs. Have you the seeds of any past disease working in your system? IMPOTENCY or Loss of Sexual Power, and do you contemplate MARRIAGE? Do you feel safe in taking this step? You can't afford to take any risk. Like father, like son. We have a never failing remedy that will purify the Blood and positively bring back Lost Power. MIDDLE-AGED MEN. — There are many troubled with too frequent

many troubled with too frequent evacuations of the bladder, often accompanied by a slight smarting or burning sensation, and weakening of the system in a manner the patient cannot account for. On examination of the urinary deposits a ropy sedi-ment will often be found, and some-times particles of albumen, and color to of a thin milkish hue, again changing to a dark, torpid appearance. There are men who die of this difficul-ty ignorant of the cause, which is the

ascond stage of seminal weakness. The doctors will guarantee a perfect cure in all such cases, and healthy restoration of the genito-urinary organs.

VIETED FRUNCHMAN.

PAUL DESCHANEL, PRESIDENT OF CHAMBER OF DEPUTIES, TO WED.

To be 45 years of age, just in the prime of life; to be handsomer than the majority of men, girted with genius and an oratorical tongue; to be the president of the chamber of deputies, with splendid prospects of becoming one day president of the French republic, and, best of all, to be one of the 40 immortal members of the French academy-what more could Paul Deschanel desire? Only one thing . was needed to complete

Paul Deschanel is one of the most brilliant men of his age in France. He was born in Brussels in 1855 and is the son of Professor Emile Deschanel of the College of France. Paul Deschanel received a very good education and studied law. He held minor positions under the French government and ran for a seat in the chamber of deputies in 1881. He was defeated, but gained his scat four years later. He has been a member ever since and has won a brilliant reputation for his oratory, logic and grasp of public questions. In 1899 his fellow members elected him president of the chamber, and he was recently re-elected. This dignity is considered the third highest

Besides his political reputation M Deschanel has won distinction in the world of letters. He has written a number of books on various subjects, all of which have been favorably received. In 1899 M. Deschanel was awarded the highest possible French distinction, membership in the "Forty Immortals," as the French academicians are known. In 1891 he was sent as a special envoy. from France to the United States to study labor and sociological problems.

The finacee of this brilliant young politician-author, is Mile. Price, daughter of a member of the chamber of deputies and granddaughter of member and perpetual secretary of the French academy. All France re-joices that Paul Deschanel has at length consented to take a partner to share his many honors and digni-

A Bad Combination.

Why, oh why, will ladies who have ingrown nerves and are built on the semi-hysterical lines of architecture insist on going into the pyramids? asks a writer in The Sphinx. I saw the other day a measly little shrimp of a woman struggling with three or four stalwart Arabs-this was in the pyramid, where the dust Was thick and the darkness was thicker. She fainted, and the Arabs had a fit, their candles went out and the flash of a magnesium light showed a pic-ture that was a study. The fumes of breath of the Pharaohs, do not form a combination that smells like peach es and cream; besides, the bats fluttering about the place making one's heart beat like a trip hammer. But why should I lecture the poor little thing? She's only a woman with a grievance—there are plenty of them If she don't climb to the top of the pyramids she grieves; if she succeeds. in reaching it she comes home walk-ing on her ankles and holding the small of her back, and she grieves; so I am sorry I spoke.

An Absinthe Club.

Berne a new drinking society has been formed under the name of the Absinthe Club, writes a Lauscorrespondent of the London Express.

The members bind themselves to drink nothing but absinthe, and also to pay a small sum to the treasurer in the shape of a fine for each glass drunk. These fines are to provide excursions, and so successful has the club been that the expenses, in cluding a band, of the first excurwere entirely covered by the amount paid in fines.

Absinthe drinking in Switzerland is increasing to such an extent that societies have been formed for the purpose of delivering illustrated lectures all over the country showing the terrible effect this liquor has on the system.

The Bicycle Wheel in Astronomy. At the Yale observatory an interesting use has been found for the wheel. By fitting such a wheel with a series of opaque screens placed at regular intervals and then rotating it with the aid of a small notor at the rate of from 30 to 50 turns in a minute in front of the cameras used to photograph meteors, Dr. Elkin has succeeded in measuring the velocity of the meteors' flight. The principle depends upon the interruptions produced by the screen in the trails of light made upon the photographic plates by the flying meteors. The velocity of the wheel is known at every instant by means of a chronographic record, and the length of the interruptions indicates the speed of the meteors.

Poaching in London Parks. Nearly all the London parks are well stocked with eatable birds, says the Glasgow Evening News, and it is the easiest thing in the world for the loafers to kill them, clean them and carry them off to the nearest hot-plate for roasting. A story is told by Londoners of a couple of imtold by Londoners of a couple of impecunious Scotch black-and-white artists who took a garret in Lincoln's Field Inn, and lived for a week on Law Court pigeons, which are plump, lively, plentiful and tame, and would doubtless make a good meal. In addition to poaching in the parks there is also good reason to believe that many of the rare birds sold to shady bird dealers are sparsed there. ow the Danube Is Robbed Through

Diversion of Its Tributaries Geologists have long known that one stream may appropriate the waters of another by gradually encroaching upon its watershed and diverting its tributaries one by one. This kind of theft is at least frank and open. It takes place on the surface, and every one, at least every geologist, can see what is going on. The river Danube, according to expert author-ity, is suffering from a more insidious form of subhert by form of robbery, by which the Rhine profits, part of the Danube's water being drawn off underground into the Rhine valley. And this may be of great importance to future dwellers of the Danube, for it is not stopped it may and by for if it is not stopped it may end by causing the river below the point of absorption to become permanently dry. Says M. E. A. Martel, writing on this subject in La Geographic (Paris):

"In a recent geological work \* \* Professor Albrecht Penck has called attention to the subterranean drainage of one thing was needed to complete his happiness and to round out his life, and that want M. Deschanel is about to supply. He is soon to be and Tuttlinger (Wurttemberg) the fissures in the limestone formation draw off the waters of the Danube underground—a phenomenon observed as long ago as 1719 by F. W. Breuinger. This writer suggested that the water thus drawn off reappeared in the springs of Aach, a little town near lake Constance

\* \* and his hypothesis was verified by Knop in 1877 by the use of fluoce-

> Still more recently, the writer tells us, other instances of subterranean "cap-ture" have been noted by which part of the waters of one river are diverted into the drainage basin of another. Now it is remarked by Professor Penck that unless. this loss of Danube water is stopped in some way it will go on increasing gradu-ally until it will take the whole of the river's supply, leaving the lower river bed quite dry, as it is left occasionally now, according to Quenstedt, in years of drought. Then the gradual deepening of the Danube valley will end at the point of absorption. Below Monringen will ex-tend a dry valley, while above a "blind valley" will be drained by a subterranean river. This is not a flight of the imagina tion, for the same thing has happened to the river Foiba in Istria and the Recca near Triest. The author adds that these and other cases, notably in Dalmatia show what threatens the Danube valley unless man intervenes. The length of time that elapses before the reappearance of the water at Aach (60 hours) shows that it must make a long circuit or that it encounters great obstacles underground. It is noted by M. Martel that Professor Penck's book goes far to confirm a theory advanced by himself that subterranean circulation of water is gradually taking the place of surface drainage in limestone regions.

SKIN DISEASES. Simple Precautions by Which They

May Be Prevented. Among the most common diseases of the skin are acne and eczema, one of which is known to be and the other probably is the result of the presence of a microbe on or in the skin. This microbe is a vegetable growth, although a very minute one, and, like other noxed and has begun to grow it is often extremely difficult to dislodge it.

Every farmer knows that it is easier to keep a field clean by constant care than to clear it after it has once been overgrown with weeds. It is the same with the skin. It is exsier to keep the skin in health and to arrest a commencing disease than to cure a disease once it has become firmly established.

If it were generally understood that the presence of a few pimples constitutes a true skin disease, which, if neglected, will probably grow worse, fewer persons would suffer from the disfigurement of

The skin is much like the system in general. If it is in good condition, it will repel the assaults of disease, but if neglected it becomes less resistant and soon offers a favorable soil for the

growth of noxious germs. The skin is one of the so called ex-cretory organs, and if the other organs f similar function-the kidneys and the bowels-do not perform their erly an undue proportion of the waste products of the body must be got rid of through the pores of the skin. throws work upon the integument which it is not accustomed to perform, and it soon becomes diseased in consequence.

The first thing necessary to keep the skin well is to maintain the health of the body by exercise, cleanliness, fresh air day and night, good food properly cooked, a sufficient amount of sleep and suitable clothing. In addition to these general measures the skin itself should receive special attention in the way of a daily bath, followed by vigorous rubbing with a coarse towel or flesh brush.

Some persons have naturally clear skins, while others appear to have a special predisposition to black heads and inles. The fortunate ones must see to t that they do not mar what nature has given them by an unhygienic mode of life, but the others need not despair, for their tendency to eruptions may often be overcome by scrupulous care both of the body and of the skin itself, after the manner above indicated and in such other ways as the physician may direct.-Youth's Companion.

It voiced not only the dialect but the habits of thought of a people or locality. From a paragraph of a dozen lines it grew into a half column, but always retaining its conciseness and felicity of statement. It was a foe to prolixity of any kind. It admitted no fine writing or affectation of style. It went directly to the point. It was burdened by no conscientiousness. It was often frever-ent. It was devoid of all moral responsibility, but it was original. By degrees it developed character with its incident, often in a few lines gave a striking pho-tograph of a community or a section, but always reached its conclusion without an

unnecessary word Boom by Innuendo.
