OUCH ! ! ! ! ! This kind of rough
talk will be heard less here in town if
people troubled with corns will follow
the simple advice of this Cincinnati
authority, who claims that a few drops
of a drug called freestone when applied
to a tender, aching corn stops soreness
at once, and soon the corn dries up
and falls right out without pain.
He says freestone is an ether com-
pound which dries immediately and
never inflames or even irritates the
surrounding tissue or skin. A quarter
of an ounce of freestone will cost very
little at any drug store, but is suffi-
cient to remove every hard or soft
corn or callus from your feet. Millions
of American women will welcome this
discovery since the inauguration
of the high heels.

DALHOUSIE.
Dalhousie, May 8.—Our citizens are
watching with renewed interest the
steady improvement being made to
the new P. Q. Lumber Co. mill. It is
expected that the manufacturing of
lumber will begin about the middle of
June. If there is delay it will be
caused by the difficulty in the trans-
fer of machinery. It is said that a
side walk will be built to the mill. In
the meantime pedestrians are using
the railway track and enjoy the pleas-
ure of the scenery of our western
front and the balmy western breezes.
The site owned by the P. Q. Lumber
Co. was once a busy spot. Before
confederation Dalhousie had two ship
yards, one where the P. Q. Lumber
Co. expects to saw the lumber of
their Nouvelle River limits in their
large mill situated about one mile
above our town proper, the other
where Wallace's blacksmith shop
stands. The first vessel that was
built in Dalhousie was the "Hamilton"
a brig of 360 tons, built by William
Hamilton. Mr. Geo. Haddow, our pres-
ent collector of customs, built a couple
of large vessels at ship yard point
and when the older citizens of the
shirtown gaze at the new mill, which
stands out prominent, it brings them
back to the days when crowds of peo-
ple from all parts of old Restigouche
gathered to witness the launching of
a ship.

That "Friction Pull"

When you are informed that such-and-such a belt
has a "friction-pull" of abnormal poundage, do
not imagine that you are getting a quality friction.
What you have to secure in a belt is a friction pull

Resilient Quality Must Not Be Sacrificed To Excess of Friction Strength

To obtain high figures, such as referred to above,
in both friction you have to take away from the
