

diseases of the nervous system from the anatomical and physiological view-point.

Purves Stewart, in his excellent book "The Diagnosis of the Nervous System," describes the various symptoms found in nervous diseases from an anatomical standpoint. In this present volume, by Tilney and Riley, the authors have gone further. As they state in their preface: "This work is designed to fill the gap between morphology and the practical requirements of clinical medicine. It aims to visualize the living nervous system; to make accessible an appreciation of its vital relation to the functions which go to make up life, as well as the defects in these relations which result in disease."

They have fully achieved their purpose and have opened up a new interest, as well as vision, in neurology. This book cannot be too highly recommended to all those interested in the nervous system.

THE FUNDAMENTALS OF THE CENTRAL NERVOUS SYSTEM. An Introduction to the Study of Nervous Diseases. By Purves Stewart, M.D., F.R.C.S., F.R.C.P., Professor of Neurology, Columbia University, and Henry Allen Riley, A.M., M.D., Assistant in Neurology, Columbia University. 1920. Pp. 351. 50¢. 351 pages, containing 75 illustrations, of which 25 are coloured. Price \$2.00. Publisher: Paul B. Hoeber, New York, 1921.

For many years neurologists have been endeavouring to teach
