

DETAILED COMPANY PROFILE

In the key R&D sectors identified earlier, biotechnology/biomedical sciences, microelectronics, robotics and artificial intelligence, information technology, laser technology and electro-optics, and communications technology, over 25 companies and institutions have been found to have R&D as part of their corporate/organizational structure in Singapore. Included in that number are some chemical and petrochemical companies. Although not targeted by the Government as a priority area for R&D, these companies' R&D endeavors are applicable to this study and are, therefore, explored here.
