WAGE AND FREIGHT RATE REDUCTION PLAN OF C. P. R.

Montreal, Que., May 4.—At the annual meeting of the C. P. R. shareholders today, the retiring directors, E. W. Beatty, Hon. C. J. Bique, K.C., R. Hosmer and Hon. William J. Shaughnessy were re-elected.

At a special general meeting following the directors were authorized to issue securities as they deemed fit and at such times as they should approve, as collateral to the consolidated debenture stock. No argument was mentioned, but President Beatty said that there still remained unissued \$80,000,000 of consolidated debenture stock.

In his address President Beatty referred to the exceptional conditions under which the company had been operating during the year and paid a tribute to the loyal service of the officers and the high and greatly increased wages may have been justified, but they were accompanied by conditions which imposed a heavy burden on the transportation facilities of North America.

The exceptional conditions of the year and the high wages greatly increased the cost of operation. The effort to secure reductions in wages and alterations in working conditions had already been commenced in the United States, and what would be accomplished there would undoubtedly reflect on the rates of pay and working conditions in Canada. The increase in wages was a potent factor in the increase of freight rates. He said that a reduction in both wage and freight rates would have a beneficial effect on the general sentiment of the country.

"The future scarcity of the country's liquid fuel supply," continued Mr. Whitford, "is now so apparent that the question of its early replacement has become a vital problem in natural economics. The problem, however, is of such magnitude that only from a consideration of new sources of energy and the discovery of new raw material would it seem that any solution could be effective. A question involving the synthesis of some 4,000,000,000 gallons of feasible substitute annually calls for the development of new ideas and new sources of energy. Our one great source of energy is undoubtedly that of the sun. How can this source be utilized? Obviously in the growth of plant life from which, in turn, alcohol and other fuels may be made."

Mr. Whitford said that the annual production of alcohol from the pine plant in the Philippines is now nearly 5,000,000 gallons and that one distillery there had produced ninety-three per cent. alcohol at a cost of about twenty cents a gallon, and, if operated to full capacity, could make it at a cost of fifteen cents a gallon.

Mrs. G. A. Kuhring has an extensive itinerary for her tour in the northern part of the province in the interests of the Red Cross enrollment campaign. Those centres which she has arranged to visit are Campbellton, Bathurst, Dalhousie, Newcastle and Chatham. If time permits she will visit other centres and will make arrangements during her tour. She hoped to return to St. John by the end of the week or early next week.

When it became a question of finding homes for this great army of fugitives from Bolshevik Russia, a committee appeared at the refugee headquarters of the Russian embassy, speaking the Russian language of 150 years ago, and announced that it represented a group of villages of Old Believers, located near Panderma, on the Marmora Sea, and week.

STORE OF ENERGY IN TROPICAL PLANTS. Avert Future Motor Fuel Scarcity by Utilizing Alcohol Resources.

H. N. Whitford, of the Yale School of Forestry, told the American Chemical Society in its annual meeting that alcohol manufactured from the moist vegetation of tropical forests and jungles could be utilized to avert a future scarcity of fuel for driving automobiles.

There is an abundance of alcohol in tropical vegetation, he said, but the difficulty lies in finding the means of manufacturing it profitably. "The evidence is conclusive," said he, "that the tropical sun has the power to store up more energy in the form of cellulose in a given time than has the temperate sun. If this is in a utilisable form, it remains for the ingenuity of man to overcome the difficulties of profitably applying it. With the increasing needs of the nation, it is reasonable to expect that sooner or later it will be necessary to utilize more fully the plant resources of the tropics."
