## DO YOU NEED A MATTRESS?

If, so, don't buy until you have seen the "Dixie No Tuft" mattress which has revolutionized the bedding business. The absence of tufts does away with the hard spots which tuffing inevitably produces, and with the depressions at every tuft, which are gathering places for dust, dirt and germs.

Our space is too limited to describe in detail why the Dixie has twenty-five per cent. more elasticity than the tufted type; why it presents a better appearance at first, and why it keeps that appearance after other mattresses have spread and sagged out of shape.

But if you will write or phone us for a circular which fully describes all these points, or, better still, call and let us show you samples, we feel sure that you will agree with us that it is the BEST ON EARTH.

## THOMAS ADAMS GIVES ROTARY CLUB HIS VIEWS ON GOOD ROADS

Interesting Address Delivered to Rotarians Yesterday by Town Planning Expert — What the United States has Done and is Doing to Improve its Highways — Influence of Good Roads on Immigration.

The Rotary Club at its weekly luncheon yesterday heard one of the best and most practical addresses they have ever listened to. The speaker was Thomas Adams, and the subject "Good Roads." Mr. Adams is the town planning adviser of the Commission of Conservation for the Dominion and as he considers town planning and good roads inseparably connected has made a special study of the best way to obtain them for the community at large. He dealt with the subject from the following angles: Commerce and its distribution, the road and land settlement, good roads policy, apportionment of cost and what the United States is doing.

**Commerce and its Distribution.**

The division of labor, the manifold ramifications of industry, the intricate systems and world wide character of exchange, and the complex social tendencies, which are characteristic of modern life, present a condition which justifies the remark that commerce is the life-blood of nations. Flowing from the throbbing heart of labor, as applied to production and distribution, it enters the arteries that carry it to its final goal. Like the blood of the body it demands great and small channels of distribution to serve the needs and purposes of a world that never stands still—but is always receding or progressing. Complex as it is in detail, there are general governing features in commercial production and exchange that make it clear to us along what lines we may achieve success or failure.

Commerce is local and inter-local, provincial and inter-provincial, national and international. It needs the water-way, the railway and the road. Not the least important of these is the road. That is so in any country, but in a country like Canada, so largely devoted to agriculture, covering so wide an area, and having a scattered population, the road, in the aggregate, is of equal importance to the railway for purposes of encouraging production and stimulating commerce. With modern means of transportation by road there can be no further question about that, and yet how insignificant is the expenditure we are incurring in building up our road system to that which has been incurred in railway development.

**The Road and Land Settlement.**

The development of a good road system is essential to successful farm settlement. One of our troubles in Canada is that the population is spread over too wide a territory. Our national and provincial policies and our railway administration have encouraged that. Productive land in older provinces and in the older settled parts of new provinces is neglected or allowed to be idle because of speculation, or a haphazard system of settlement, and population is attracted into new areas to begin again the process of using up national resources. In the older areas millions of dollars have been spent in railways, roads, building construction, etc. Ten times the population we now have in these areas can be accommodated with ease, and ten times that population is needed to make profitable use of our railways and to enable us to build up a really good road system.

Good roads in the most productive

**GLASS OF SALTS CLEANS KIDNEYS**

If your Back is aching or Bladder bothers, drink lots of water and eat less meat.

When your kidneys hurt and your back feels sore, don't get scared and proceed to load your stomach with a lot of drugs that excite the kidneys and irritate the entire urinary tract. Keep your kidneys clean like you keep your bowels clean, by flushing them with a mild, harmless salts which removes the body's urinous waste and stimulates them to their normal activity. The function of the kidneys is to filter the blood. In 24 hours they strain from it 500 grains of acid and waste, so we can readily understand the vital importance of keeping the kidneys active.

Drink lots of water—you can't drink too much; also get from any pharmacist about four ounces of Jad Salts; take a tablespoonful in a glass of water before breakfast each morning for a few days and your kidneys will act fine. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for generations to cleanse and stimulate clogged kidneys; to neutralize the acids in urine so it is no longer a source of irritation, thus ending bladder weakness.

Jad Salts is inexpensive; cannot injure; makes a delightful effervescent lithia-water drink which everyone should take now and then to keep their kidneys clean and active. Try this, also keep up the water drinking, and no doubt you will wonder what became of your kidney trouble and backache.

can improve on both by setting up a department of municipal affairs for the province, with an expert staff to deal with all municipal problems, such as highways, town planning, housing, municipal finance, water supplies, sewerage disposal, unemployment, etc., a department with skilled advice at the disposal of all municipal bodies working through and with them in perfecting municipal administrations. We talk about organizing schemes for returned soldiers, through the federal and national governments. No such schemes can be successful unless administered through the municipalities, with their local knowledge and personal and daily contact with men and conditions. We need a skilled department because of the numerous problems to be dealt with, such as: (a), road classification into main roads, market roads, local feeders, etc.; (b), allocation of cost; (c), road construction and continuous maintenance; (d), economical management. We are better to have a government department than a special commission if possible, because good local self-government is as much to be desired as efficiency.

## Apportionment of Cost.

There must be some system of apportioning cost between the federal, provincial and municipal governments. Different systems prevail in different provinces or states. The Ontario system is working successfully and may be taken as an example. The province has a map of trunk roads. It provides 40% of the cost of constructing new roads and 20% of the cost of maintenance out of provincial funds. The revenue derived from motors goes a long way to meet that contribution. The municipality contributes the other 60% and 80%, respectively. An exception occurs in the proximity of cities and large towns where roads which form the principal access to these cities have to be partially made and maintained by the province, the city and the municipality in the following proportions:

	Construction.	Maintenance.
Province	40%	20%
City	30%	40%
Rural Municipality	30%	40%

These suburban roads just outside the boundaries of cities are the most important. They are the converging channels of distribution to and from the centre, and they are often the worst roads because of the heavy traffic. With the tendency to spread our industries into wider areas, and for residents to live in the outer suburbs, the need for better roads immediately adjacent to our cities is a pressing one. The development of a trunk system of roads may involve paralleling some of the railways with trunk roads, but that is not necessarily a disadvantage, and cannot be avoided. You must have your trunk system first and follow up with branch feeders later. We want a proper plan, and having that it will be a good thing to have some of the trunk roads running in the same direction as the railways, both in the interest of the farmers and the motorists.

## What the United States is Doing.

The example of the United States in its good roads policy is worth noting. They are copying us in our town planning, but we need to copy them in regard to good roads. The mileage of improved surfacing in the rural roads of the United States is increasing at the rate of 16,000 miles a year, and in 1915 about 277,000 miles had been improved. Half of these improvements were carried out under the state supervision. Some form of highway department exists in all States except three. Since their inception these departments have expended to January 1st, last, an aggregate of \$265,350,825 in State funds for road and bridge construction, maintenance and administration.

## Conclusion.

In New Brunswick I understand you spend the trifling sum of \$175,000 in construction and maintenance of roads. Your population is small and you must cut your coat according to your cloth—at present, however, you are not providing enough cloth to make a lining for the old coat you are wearing. New Brunswick has many good roads, but if it is going to take the place it ought to take in the march of progress in this country, it wants to treat roads with proper seriousness.

## Good-bye Dyspepsia

Do Your Own Cooking, Sample Each Dish and Still Have a Keen Appetite.

Try Stuart's Dyspepsia Tablets Free. Most women lose their appetites, get sour stomach, water brash, heartburn, gas, rumblings, bad breath, coated tongue and tired all over after cooking their own meals. A Stuart's Dyspepsia Tablet after each meal will overcome these troubles. If you enjoy preparing a luncheon or an attractive dinner but the odor of cooking palls on you, take one of Stuart's Dyspepsia Tablets after your next meal and you will find at once a remarkable improvement.

Stuart's Dyspepsia Tablets are for sale at all druggists at 50c a box. Send coupon below today and we will at once send you by mail a sample free.

**FREE TRIAL COUPON.**

F. A. Stuart Co., 229 Stuart Building, Marshall, Mich., send me at once a free trial package of Stuart's Dyspepsia Tablets.

as a first necessity in building up its agriculture and its industries. All that can be spared after meeting the costs of war and the needs of industry and public health should be invested in good roads.

The war came at the end of a period of human achievement and to some extent represents culminating points of that period; when peace comes it will be the starting point of a period of human improvement and of conservation promoted in the first place by necessities created by the war itself, and in the second place by our enlarged knowledge of what constitutes the best foundation of a prosperous social state. Good roads are part of that foundation. Even while the war lasts we should be getting ready for the period of reconstruction that must inevitably follow; reconstruction not only of things that have been destroyed by the war, but of those institutions and things that, in their present form have been discredited during the war. Among other things that have been discredited is that mere physical force, even when accompanied by efficiency, can over-rule the world. A good roads system, as I have tried to point out, is a good thing in itself, but its value is as a means to an end, and that end is the building up of a prosperous, virtuous and happy social state in this Dominion. We will attain that end more rapidly if while we are at war we prepare for peace.

## REPAIRING PIPE BREAK NEAR ONE MILE HOUSE

Men of Water and Sewerage Department Kept Busy Yesterday on 24 Inch Main

The men of the water and sewerage department were still at work yesterday on the break at the One Mile House in the 24-inch main. In order to make the necessary repairs it was found that the side of the vault would have to be broken out as the break was close to the wall. While they are at the work a new "T" and stopcock will be put in.

As an instance of the benefit derived from the cleansing of the 24-inch mains last year Commissioner Wigmore pointed out that when the water was shut off to repair this break the gauge which under the old conditions would have dropped to zero had not fallen below 22 pounds pressure and nobody had been without water.

## A Good Place to Buy Good Clothes

One man may ride a horse to water, but a dozen can't make him drink.

Same way with advertising—it is an easy matter to bring people to a store, but the buying part rests with them.

That's why we advertise exactly what we can do, no more, knowing the clothes we offer will do the rest. When you buy ready-tailored clothes why not buy the best? Cost you no more than the other kind. There's no better made in Canada than the kind we sell.

Overcoats, \$12 to \$40. Suits, \$10 to \$32.
