Trade Notes

CANADA AND THE TELEPHONE Few inventions so widely used as the telephone are so poorly understood by the general public, either as regards history and development or the real importance of this instrument in every-day life. Realizing this fact The Ca-nadian Independent Telephone Company, of Toronto, have issued a special book, giving particulars about the early history. Pen drawings tell an interesting story of some of the immedi-ate uses to which telephones can be put to save time, money and worry. Every reader of THE FARMER'S ADVO-CATE should have a copy of "Canada and the Telephone." Write the Canada Independent Telephone Company, To-ronto, Ontario; and ask for it. It is interesting and valuable.

BETTER THAN STRYCHNINE

During the past few years much has been done to combat the gopher pest in Western Canada. Of the several methods adopted, the use of "Kill-Em-Quick" has proven very satisfactory. Investigation regarding the merits of this poison and strychnine revealed evidence very flattering to "Kill-Em-Quick." A package of the latter, cost-ing \$1.25, was found to have a killing power capable of putting 4,000 go-phers or squirrels out of business, and the results in dead gophers in a field in which this poison was set demonstrated that such had been done. A similar test with strychnine showed a falling off of 66_3^2 per cent. The killing power of \$1.25 worth of strychnine was found be 2.623, and only 874 animals had been killed.

This depreciation was considered to be due to the fact that strychnine being very insoluble, a large quantity of water must be used to dissolve it and likewise a large amount of grain must be added in order to absorb the liquid mixture. This distributes the poison and reduces its strength to such an extent that it is practically in-effective, as it will thus require 20 ker-nels of this prepared grain to kill a single gopher or squirrel. On the other hand the odorous principle of Kill Em-Quick attracts the pests; the balmy ingredients that are very pleasing to the taste (which entices them to eat the prepared grain) and the action of the poisonous powder (that adhere to and forms a coating on the outside of the kernels) is almost instantaneous as Kill-Em-Quick comes in immediate contact with the tissues of the stomach. These statements of fact which were

based upon the average results ob tained under like conditions can be easily verified by any interested party through a practical demonstration on their own fields and under their own supervision.

The Mickelson Kill-Em-Quick Com-pany, Department F, Winnipeg, Man., or Minneapolis, Minn., will be pleased to send folders, testimonials and other information about Kill-Em-Quick to any one interested in the extermination of the gopher pest.

Questions & Answers

GENERAL

Questions of general interest to farmers are answered through our columns without charge to bona-fide subscribers. Details must be clearly stated as briefly as possible, only one side of the paper being written on. Full name and clearly stated as brieny as possible, only one side of the paper being written on. Full name and address of the enquirer must accompany each query **as** an evidence of good faith but not necessarily for publication. When a reply is required by mail one dollar (\$1.00) must be
