## REVOLVING DRYING KILN.

THE Subscriber begs to inform the Millers,  
 Merchants, and the Public generally, that he  
 has, at considerable labor and expense, invented  
 and completed a Machine for DRYING Wheat,  
 Oats, Barley, Indian Corn, or any other Grain  
 necessary to be dried before being manufac-  
 tured: and he assures them, that it is the cheapest  
 and most expeditious mode of Kiln Drying Grain  
 now in use. This Machine will dry from thirty to  
 sixty bushels of grain per hour in a most perfect  
 manner. It is so constructed, that the grain passes  
 through the machine, from thence to the rolling  
 screen, where it is cooled, in a fit state for manuf-  
 acturing. This machine requires very little power  
 to keep it in motion, and may be driven by a small  
 strap from any wheel in the mill. A quarter of a  
 cord of hardwood will produce heat sufficient for  
 drying a thousand bushels of grain.

The Subscriber begs to inform the public, that  
 he has obtained a Patent for his Machine, which  
 extends through the United Province of Canada,  
 and that he is prepared to manufacture the above  
 Machines to order, or dispose of the right to per-  
 sons desirous of manufacturing or using the same.

Any further information on the subject may be  
 had, by addressing the Subscriber. All commu-  
 nications (post-paid) will be immediately replied  
 to.

 inches fall, and is enclosed either in another  
 metal cylinder, or a brick arch, of thirteen inches  
 diameter, leaving a space of one inch and a half
