BCIT STUDENT SURVEY - Round 1

This is a survey prepared by students from the BCIT School of Business. The intent is to assess, by way of a Delphi survey, the perceived impact of the FTA on various business factors. Three rounds of this survey will be completed during the course of the Conference.

This "Round 1" answer sheet will be collected as you take a coffee break in the Morning Plenary Session. Just before lunch, the summary results of the first round plus a Round 2 answer sheet will be distributed. That answer sheet will be picked up after lunch. The summary results of the second round plus the final Round 3 answer sheet will be distributed just after the first workshop of the afternoon, and picked up at the end of the Conference. The Delphi technique makes the premise that members of a group will move towards a consensus on a given question as they get feedback on the question from other members of the group.

To begin with, please indicate the sector that you will represent in your answers to the questionnaire, and your basic role. Thereafter, in answering the questions, simply make a mark at the point that most nearly reflects your opinion on the question. For example:

NEGATIVE POSITIVE | Worse | -15% | -10% | -5% | No Change | +5% | +10% | +15% | Better |
