

1823

FEBRUARY hath 29 Days.

Away from yonder leafless grove,
Now let us turn our eyes ;
And view those silent orbs that move,
In order through the skies.

Last Quarter, 8th day, 3h 41m afternoon
New Moon, 15th day, 6h. 31m morning
First Quarter, 22d day, 10h. 24m. morning

Cure for the Influenza.—Drink very plentifully of barley water sweetened with brown sugar, and strongly impregnated with an acid ; and observe strict temperance in your diet.

Sundry Hints.—Finish the transportation of wood, timber, plaister, and other heavy articles, while there is good sledding ; and kill your pork, if you have not done it already. Look well to your barns, your wood pile, your store pigs and poultry. Visit your cattle yourself—trust not your boy, however faithful he may be. Fodder them twice in the morning, and twice at night, if you would have them thrive. If your fodder is poor, sprinkle it with brine, which will improve it much. Let your cows and ewes, forward with young, be fed with corn, potatoes, or turnips. Give your hens a little slackened lime, or pulverized brick, to form the shell, and you will have a plenty of eggs which will make your bacon palatable. Get out your flax—let not the music of the spinning wheel cease for the want of it. Cut scions for grafting, and put them in your cellar. If you have not learned the best method of grafting, read some of the best books for direction.

To preserve Game in hot weather.—Game or poultry may be preserved for a long time, by tying a string tight round the neck, so as to exclude the air, and by putting a piece of charcoal in the vent.
