The winding barrel on which the hoisting chain is wound is made with a second barrel, which runs loosely upon it, but is caused to rotate with the primary barrel by a clutch actuated by a hand lever. To raise the load, the primary barrel is put in motion, then if the second barrel is put into gear, the main jib is quickly drawn in, and the load moves inwards in a horizontal line, in readiness to be at once deposited in the truck, waggon, or other receptacle placed in readiness to receive it.
